Rotary Instruments

Whether ceramic abrasives or polishers: SHOFU's rotary instruments are available in various head sizes and different attachment and shank types – depending on handpiece design, indication and therapy. SHOFU offers a wide range of rotary instruments, not only for dentists, but also for laboratories.

The instruments should be used exclusively for their respective indications. It is important to insert them completely into the straight, contra-angle or turbine handpiece, taking care to avoid any jamming. The instruments should also be regularly inspected for any signs of wear.

Rotary instruments come in three shank types:

■ HP Shank

The smooth HP shank is attached to a straight dental handpiece (HP) by means of a chucking device. The standardised diameter of the HP shank is 2.35 mm.

■ CA Shank

The CA shank, 2.35 mm in diameter, fits positively in a contra-angle (CA) handpiece and is manually locked in place with the aid of a groove at the end of the shank.

■ FG Shank

The standardised diameter of the smooth FG (friction grip) shank is 1.6 mm; it is used in a high-speed turbine handpiece.

The HP mandrel is suitable for all unmounted wheels and disks (displayed here: SoftCut PB, Greenie and Brownie unmounted wheels). It reliably holds them and is easy to handle. It is advisable to always perform a test run before use and check the instruments for safety and smooth operation.

The optimised design of the mandrels for Super-Snap, Super-Snap Buff and Super-Snap SuperBuff ensures that these flexible disks are securely attached. SHOFU developed a special CA mandrel (with white banded shank) for all OneGloss polishers; in the example image with mounted Midipoint).

The most commonly used HP shapes of the Dura-Green ceramic-bonded stones are also available in economical laboratory packs of 72 pieces, in addition to the standard packs of 12 pieces (above: Dura-Green WH6 and IC5).

Recommended Speed Range

The recommended speed range for best results varies depending on the shank type and head shape and size. The speed used must not exceed or fall below this range.

Maximum Permissible Speed

The maximum permissible speed must not be exceeded! This would result in a substantial loss of material and an increased safety hazard for users and patients.

Additional Notes

To ensure the safe and trouble-free use of the instruments, there are a few additional notes on certain areas of application.

Contact Pressure

The recommended contact pressure provides optimal results. The use of excessive pressure must be avoided. This could damage the working part of the instrument, harm the pulp due to overheating, or produce undesirable surface roughness due to broken blades. Even instrument separation might result.

info

You will find detailed information about all rotary instruments on the SHOFU website.

Additionally catalogues, instructions / directions for use and other publications are available as PDF files for download.

The diamond-coated Abrasives Dresser can be used to clean and redesign ceramic-bonded stones. Besides, it allows the user to easily adjust the stones, creating sharp angles and round shapes. When necessary, the Abrasives Dresser may be cleaned with a brush and water or in an ultrasonic bath. See page 50 for order information.

Dura-Green

Silicon carbide stones with a ceramic binder

Dura-Green stones are made of high-quality silicon carbide and are exceptional for fast and splinter proof contouring and finishing of porcelain, composite, precious alloys, and amalgam.

In the dental laboratory the extensive range of shapes helps to optimally produce the individual characteristics of the surface texture of front teeth with their vertical and horizontal structures. In the dental practice Dura-Green stones are used for quick and simple contouring and finishing of restorations made of all modern filling materials.

■ Dura-Green stones can be cleaned or customised to any individual shape with the Abrasives Dresser.

BENEFITS

- Precise concentricity
- Low vibration performance
- Consistent cutting action
- Binder matched exactly to the grinding particles
- Long-lasting operating life
- Optimal cutting performance

Indications

■ CHAIRSIDE

Contouring and finishing of porcelain, composites, precious metal and amalgam

■ IN THE DENTAL LABORATORY

Contouring and finishing porcelain, indirect composites and metals

Range of Application

Suitable for the following materials:
porcelain, composite, precious alloys and amalgam

Dura-Green DIA

Vitrified-bonded diamond abrasives

Dura-Green DIA are designed for contouring porcelains, ceramic copings, fine anatomical details or fragile sensitive margin areas. Thanks to densely packed diamonds embedded throughout Dura-Green DIA provide smoother surfaces on all-ceramic and zirconia restorations and an enhanced performance versus silicon carbide instruments.

■ Low vibration and minimal heat generation make the abrasives comfortable and safe to use, eliminating any risk of chipping or micro-cracking. The instruments feature high edge stability and enhanced performance at the same time.

Min⁻¹ Max. 30,000

0504	1 pc.	SHOFU Adjuster (see page 50)

BENEFITS

- Efficient and material-friendly processing
- Minimised risk of micro-cracking
- Low contact pressure
- Minimal heat generation
- High edge stability

Indications

Contouring and finishing indirect restorations made of ceramics, zirconia, lithium disilicate etc.

Range of Application

Suitable for the following materials:
All-zirconia or zirconia-based restorations, lithium disilicate, alumina, pressed & layered ceramics and metal surfaces

The SHOFU Adjuster, made of aluminium oxide, is ideal for instrument cleaning and individual shape adjustment (see p. 50).

Dura-White

Vitrified-bonded aluminium oxide stones

For finishing of enamel, glass ionomer cements, composites, porcelain and prepared tooth abutment, none exceeds the performance of Dura-White stones. Made of micrograined aluminium oxide grits, each "Arkansas" stone is perfectly balanced and suited for very fine finishing and smoothing of various dental materials.

BENEFITS

- Precise concentricity
- Low vibration grinding
- Consistent finishing performance
- Economical
- High edge stability
- Long-lasting service life
- Wide range of shapes

Indications

CHAIRSIDE

Finishing and very fine working of e.g. composite or glass ionomer filling materials, porcelain, tooth enamel, e.g. smoothing crown preparations after contouring with diamond abrasives

IN THE DENTAL LABORATORY

Very fine contouring and fine finishing of porcelain or composite restorations

Range of Application

Suitable for the following materials:
porcelain, composite, compomer, dental hard tissue, glass ionomer cement

PN	Quantity	Product
0201-0250	12 pcs.	Dura-White stones: HP, CA, FG shank

Min⁻¹ Recom. 5,000-20,000 / Max. 30,000 / CP 2 N

ZiLMaster

For zirconia and lithium disilicate

The three-step diamond impregnated polishing system smoothens the restorations, removes surface scratches occurred during contouring and provides a high-gloss polish. ZiLMaster is available in a variety of shapes and shanks for both extra- and intra-oral application.

Indications

Systematic polishing of zirconia and lithium disilicate restorations:

- Finishing/Prepolishing: ZiLMaster Coarse with green banded shank
- Polishing: ZiLMaster Medium with blue banded shank
- Final polishing: ZiLMaster Fine with yellow banded shank

Polishers:
Min⁻¹ Max. 20,000

Unmounted wheel:
Min⁻¹ Max. 15,000

BENEFITS

- High gloss in 3 polishing steps
- Optimal ratio between speed and contact pressure
- Precise concentricity
- Low heat generation
- Fast and efficient use
- No polishing paste is needed

ZiLMaster - Adjustment Kits

The complete system for contouring, finishing and polishing zirconia and lithium disilicate restorations is available in HP and CA shank. Dura-Green DIA contours the restorations, the three-step system ZiLMaster smoothens the restorations and provides a high gloss.

HP shank - Contents

Dura-Green DIA: 1 each KN7, TC4, WH6
 ZiLMaster Coarse: 1 each bullet, KN7, WH6
 ZiLMaster Medium: 1 each bullet, KN7, WH6
 ZiLMaster Fine: 1 each bullet, KN7, WH6

0681	1 pc.	ZiLMaster Adjustment Kit, CA shank

Brownie ■ Greenie ■ Supergreenie

For precious alloys and amalgam

Impregnated with polishing ingredients these silicone polishers are recommended for a fast and brilliant polishing of precious alloys and amalgam. Brownies are used for prepolishing, Greenies for polishing and Supergreenies (with yellow banded shank) for high gloss polishing. Without the need of any additional polishing paste the high gloss arises from the use of the silicone polisher itself, which is impregnated with high-quality abrasive agents.

BENEFITS

- High gloss in 3 polishing steps
- Precise concentricity
- Customisable
- Low vibration polish
- Optimal ratio between speed and contact pressure
- Low heat generation
- Fast and efficient use

Indications

■ CHAIRSIDE

Prepolishing, polishing and high-gloss polishing of metallic restorations such as inlays, onlays, crowns and bridges in the patient's mouth

■ IN THE DENTAL LABORATORY

Prepolishing, polishing and high-gloss polishing of metallic restorations such as inlays, onlays, crowns and bridges

Min⁻¹ Recom. 5,000 - 7,000 / Contact Pressure 1 - 2 N
Water is needed for amalgam polishing

	Shape	Cup	Minipoint	KN7	PC2	WH6	Floppie	Disk	Unmounted wheel

Ceramisté

For porcelain and tooth enamel

Ceramisté silicone polishers were designed specifically for the polishing of porcelain and tooth enamel. The Ceramisté system consists of Ceramisté Standard, Ceramisté Ultra and Ceramisté Ultra II polishers for all polishing steps.

Min⁻¹ Recom. 10,000-12,000 / Max. FG shank: 15,000;
Max. others: 20,000 / CP 1-2 N

BENEFITS

- Three coordinated polishing steps
- Optimal ratio between speed and contact pressure
- Customisable
- Low vibration polishing
- Long-lasting service
- No polishing paste is needed

	Shape	Bullet	Cup	Knife	Wheel	Midpoint	KN7	PC2	WH6	Unmounted wheel

SoftCut

For porcelain restorations

The two-step system SoftCut was developed for the polishing of fragile porcelain veneers, inlays and onlays. The two instruments of the system, SoftCut PA and SoftCut PB, are silicone polishers with integrated polishing agents. By varying the pressure, the polishing performance can be adjusted: the lighter the pressure, the higher the gloss.

Indications

Contouring and polishing of porcelain

- SoftCut PA (with green banded shank) for polishing after rough finishing (for example with Dura-Green stones)
- SoftCut PB (with blue banded shank) for polishing after fine finishing (for example with Dura-White stones)

	Shape	PC2	WH6	Unmounted wheel
	ISO No.	050	120	220

0595-0596	12 pcs.	SoftCut PA / PB shape: unmounted wheel

CeraMaster Coarse ■ CeraMaster

For ceramic restorations

These silicone polishers are densely filled with natural diamond particles. They are durable and designed for quick finishing and polishing of ceramic restorations, to provide a smooth surface. The combination of the different particle sizes of CeraMaster Coarse (dark-grey polishers) and the finer CeraMaster polishers (blue and white banded shank) ensures an efficient concept for a homogeneous surface treatment.

Indications

- CeraMaster Coarse polishers are designed for a quick finishing and prepolishing of ceramic restorations in one step only. They particularly show their forte when adjusting ceramic coping margins made from materials such as aluminium oxide and zircon oxide.
- For superpolishing CeraMaster polishers are recommended. When using the CeraMaster polishers there is no need to use an additional polishing paste, as the high shine is produced by using the diamond-impregnated silicone polishers themselves.

BENEFITS

- Silicone polisher with integrated diamond particles
- Individually customisable
- No polishing paste is needed
- Long-lasting service life
- Low heat generation

Polishers:

Min⁻¹ Recom. 10,000 - 15,000 / Max. 20,000 / CP 1.5 N

Unmounted wheel:

Min⁻¹ Recom. 5,000 - 10,000 / Max. 15,000 / CP 1.5 N

info

When using the polishers intraorally, operate each polisher under dry conditions with intermittent strokes and supply compressed air to avoid an excess overheating of the ceramic and to protect the pulp.

AcryPoint

For PMMA resins

The AcryPoint silicone polishers are designed for adjusting, finishing and polishing of acrylic dentures, all acrylic appliances and acrylic impression trays without the need to use additional polishing pastes.

Indications

- The coarse dark grey AcryPoints are used for adjustments.
- The brown AcryPoints with medium grit size are designed for finishing and prepolishing.
- The light grey AcryPoints with fine grit size are recommended for polishing.

BENEFITS

- Three coordinated polishing steps
- Optimal surface polishing of PMMA
- Exact match of abrasive grains and binder
- High gloss polishing without the need of an additional polishing agent
- Low vibration performance
- Low heat development

CompoSite ■ CompoSite Fine

For composite

CompoSite instruments are designed for a perfect finish of composite restorations without scratching the surrounding enamel. CompoSite polishers are used for finishing and prepolishing, CompoSite Fine (with white banded shank) for polishing. The flexible and adaptable cups and disks will polish subgingival and interproximal surfaces safely while pear points and midpoints are recommended for the polish of occlusal and lingual surfaces.

BENEFITS

- Silicone polishers with integrated abrasive grains
- Matches hardness of silicone
- Optimal ratio between speed and contact pressure
- Gentle treatment of the tooth enamel
- No polishing paste is needed
- Long-lasting tool life

CA shank:

Min¹ Recom. 10,000 - 12,000 / Max. 20,000 / CP 0.5 N

FG shank:

Min¹ Recom. 10,000 - 12,000 / Max. 15,000 / CP 0.5 N

Indications

CHAIRSIDE

For finishing and polishing of micro and hybrid composite restorations such as inlays, onlays, crowns and bridges in the patient's mouth as well as for removing orthodontic adhesives

CompoMaster Coarse ■ CompoMaster

For composite

The silicone polishers are impregnated with a carefully balanced blend of diamond particles. They are durable and designed for a quick finishing and prepolishing of composite restorations to provide a uniform and smooth surface.

The different grains of the coarse CompoMaster Coarse in combination with the finer CompoMaster polishers (with yellow and white banded shank) form an efficient approach to a homogeneous surface treatment.

Indications

- CompoMaster Coarse polishers have been designed for contouring and prepolishing composite surfaces in one step.
- The use of CompoMaster instruments provides superpolished restorations.

BENEFITS

- Silicone polishers with integrated diamond particles
- Precise concentricity
- Optimal ratio between speed and contact pressure
- Individually customisable
- No polishing paste is needed
- Particularly long-lasting tool life
- Low vibration processing
- Low heat generation

There are two CompoMaster Coarse and CompoMaster assortments with 4 different polishers each available.

Unmounted wheel:

Min⁻¹ Recom. 5,000 - 10,000 / Max. 15,000 / CP 0.5 N

info

When using the polishers intraorally, operate each polisher under dry conditions with intermittent strokes and supply compressed air to avoid an excess overheating of the ceramic and to protect the pulp.

OneGloss ■ OneGloss PS

For composite and tooth enamel

OneGloss and OneGloss PS instruments are made of highly concentrated aluminium oxide with silicone as binder. OneGloss PS (Plastic Shank) polishers are mounted on a sturdy plastic mandrel. The hygienic packaging ensures an easy storage and use of the instruments. As they are disposable they improve the process flow in the dental practice.

By simply altering the contact pressure, you can go from finishing to polishing with only one instrument:

- Finishing with high contact pressure (approx. 1 N)
- Polishing with feathery contact pressure (approx. 0.3 N)
- Removal of excess cement and polishing of enamel with moderate to light contact pressure
- Polishing of enamel and removal of tooth discolouration with light contact pressure

OneGloss ■ OneGloss PS (continued from page 25)

For composite and tooth enamel

Indications

CHAIRSIDE

The instruments are suited for finishing and polishing of all composite restorations and tooth enamel in one step, for the removal of excess cement without marring delicate inlays as well as for the removal of surface stains and for polishing of tooth enamel after professional cleaning.

OneGloss:

Min⁻¹ Recom. 3,000 - 10,000 / Max. 15,000 /
CP: 0.3 N for polishing / 1.0 N for finishing

OneGloss PS:

Min⁻¹ Recom. 3,000 - 5,000 / Max. 5,000 /

Super-Snap SuperBuff

For composite restorations

SuperBuff is a paste-impregnated disk for high gloss polishing of direct or indirect composite restorations. Before use the felt disks simply have to be moistened with water to generate a creamy polishing paste which leads quickly to a brilliant shine of the restoration. SuperBuff disks can be used frontal or with the flat lateral edge.

Indications

High gloss polishing of composite restorations

Min⁻¹ Recom. 8,000-12,000 / Max. 15,000 / CP 0.8 N
Moisten before use

PN	Quantity	Product
0535	1 pc.	Super-Snap SuperBuff Kit 25 disks, 2 mandrels, CA shank
0536	50 pcs.	Super-Snap SuperBuff disks
0438	6 pcs.	FG mandrel
0439	6 pcs.	CA mandrel

SuperBuff polishing disks are disposable.

BENEFITS

- Integrated polishing agent
- Activated by water
- Polishing of all composites
- Faster than polishing with pastes

1. Moisten with water

2. Polishing compound is generated

3. High gloss polishing

Super-Snap ■ Super-Snap X-Treme

Polishing of micro-filled and hybrid composites

The Super-Snap and Super-Snap X-Treme polishing system consists of coated disks and polishing strips used for the polish of micro-filled and hybrid composites.

Indications

CHAIRSIDE

Contouring, finishing, polishing and superpolishing of composite restorations

- Contouring: Super-Snap disk black (coarse)
- Finishing: Super-Snap disk violet (medium)
- Polishing: Super-Snap disk green (fine)
- Superpolishing: Super-Snap disk red (superfine)

For interproximal finishing and polishing use Super-Snap Polystrips.

No metal centre

Avoiding gouging and discolouration of composite and tooth enamel

Thin and flexible disks

Bending under pressure without breaking and allowing easier access to interproximal areas

Silicone shank protection

Elastic shank mount allows an easy placing of the disk onto the mandrel

BENEFITS

Extremely thin and highly flexible

No metal centre

Consistent 4-step contouring, finishing and polishing system

Coordinated polishing strips for interproximal areas

No gouging of enamel or restoration

Secure hold of the disk onto the mandrel (maximum control during polishing)

Min⁻¹ Recom. 10,000 - 12,000 / Max. 15,000 /
Contact Pressure 0.3 - 0.6 N

■ Super-Snap Disks

Super-Snap disks have elastic shank mounts which allow easy placing of the disks onto the mandrel. The disks are manufactured without a metal centre, thus avoiding gouging and discolouration of the composite or enamel. The thin disks are flexible, bending without breaking and allowing easier access to interproximal areas.

The disks are available with the safe side down, safe

side up and double-sided coated and come in standard (ø 12 mm) and mini size (ø 8 mm).

■ Super-Snap Polystrips

The Super-Snap polishing system includes polishing strips, which are colour-coordinated to the disks with the same grits. They offer outstanding results in surface treatment and polishing of interproximal areas.

Super-Snap disks, Super-Snap X-Treme disks and polystrips are disposable.

Super-Snap ■ Super-Snap X-Treme (Continued from page 29)

Polishing of micro-filled and hybrid composites

■ Super-Snap X-Treme Disks

The new Super-Snap X-Treme disks – an enhancement of the original green and red Super-Snap disks – are thicker to allow an enhanced contact pressure during polishing. They feature a longer service life and an increased stiffness, while also maintaining their well-known flexibility in interproximal areas.

For the first time the red Super-Snap X-Treme disks are manufactured with an advanced 3D polishing technology. Semispherical shaped aluminiumoxide grits allow space for ground debris discharge and reduce clogging and secondary scratches.

Super-Snap X-Treme disks (standard and mini) are double-sided coated.

L D3.1 x400 200 µm

Super-Snap Rainbow Technique Kit

The kit contains 180 coordinated disks in four different grits (100 pcs. standard / 80 pcs. mini), 40 polystrips, 2 Dura-White stones (CN1 and FL2), 1 CompoSite Fine midpoint and 4 CA steel mandrels.

Super-Snap X-Treme Technique Kit

Included are 160 disks in four different grits (80 pcs. Super-Snap / 80 pcs. Super-Snap X-Treme), 40 polystrips, 2 Dura-White stones (CN1 and FL2), 2 CompoSite and CompoSite Fine midpoint each as well as 4 CA steel mandrels.

Super-Snap Mini-Kit

The kit contains 48 disks in all available grits (32 pcs. standard / 16 pcs. mini), 1 CompoSite Fine midpoint and 1 CA mandrel.

Super-Snap X-Treme Disk Kits

The Super-Snap X-Treme Standard Disk Kit contains 50 pcs. each red and green standard disks, while the Super-Snap X-Treme Mini-Disk Kit contains 50 pcs. each red and green mini disks.

Super-Snap Buff Disk ■ Buff Mini-Disk

For composites, porcelain and gold restorations

The Super-Snap Buff Disks and Buff Mini-Disks feature a synthetic felt polishing cloth on the outer surface which retains expensive polishing pastes with minimum splatter or waste during use. Just a feathery polishing is sufficient for producing a high lustrous shine on porcelain and composites, with the flexible disks adapting to the tooth's natural contours. The disks have no metal centres or exposed mandrels thus avoiding discolouration of composites or ridge formation. The best results can be achieved in combination with SHOFU polishing pastes.

BENEFITS

- Polishing paste adheres to the felt coating
- Clean and economical working with polishing paste
- No metal centre

Indications

- Felt disk for the polish of composites, porcelain or gold restorations with polishing paste

PN	Quantity	Product

DirectDia Paste

Diamond impregnated polishing paste for intra- and extraoral high gloss polish

DirectDia Paste is a 20 % diamond polishing paste that uses synthetic diamond powder (particle size between 2 and 4 µm) as an abrasive grain. It provides high lustre polishing to any restoration and has been developed for polishing natural teeth or restorative materials, including porcelain, direct composites, or metals. The paste has a pleasant lime flavor and is easy to detect in the patient's mouth because of its light green colour.

Rice-sized quantity for one tooth

Use of Super-Snap Buff Disk

Easy to detect due to green colouring

Indications

- Removal of discolourations and high lustre polishing of all restorative materials
- Polishing and cleaning of natural teeth

PN	Quantity	Product
0558	1 syringe	DirectDia Paste, 3 g 2 application tips with cap

BENEFITS

- Green colouration to be easily distinguished in the patient's mouth
- Exact dosing by the application tip
- Coordinated viscosity for easy handling
- Palatable lime flavour

info

Recommended for use with Super-Snap Buff Disks and Buff Mini-Disks. The flexible felt disks allow an effective application and reach all areas of the natural tooth.

To prevent splatter and avoid excessive heat generation always use rotary instruments at speeds below 10,000 rpm.

The target surface is not required to be dry; water- or saliva moistened surfaces are entirely acceptable. Subsequently rinse thoroughly with water.

CompoSite Polishing Paste

For high gloss polishing of microfilled or hybrid composites

The CompoSite polishing paste is comprised of smooth polishing cream with submicron aluminium oxide abrasive particles to provide a long-lasting, brilliant shine on both anterior and posterior restorations.

BENEFITS

- Economical to use
- Simple dosage
- Rapid high gloss
- Soluble in water

Indications

CHAIRSIDE

For polishing composite restorations in the patient's mouth the optimal results are achieved by using CompoSite polishing paste in combination with Super-Snap Buff Disk and Super-Snap Buff Mini-Disk.

IN THE DENTAL LABORATORY

Polishing of indirect composite surfaces

Min⁻¹ Recom. 5,000 - 10,000

PN

0551

Quantity Product

1 syringe CompoSite Polishing Paste, 5 g

info

After completion of the finishing and prepolishing sequence (e.g. with Super-Snap disks or CompoSite polishers) apply a small amount of the polishing paste directly to the centre of a moistened Super-Snap Buff Disk or Buff-Mini Disk.

To reduce splatter, spread the paste in a thin, even layer on the felt disk and polish the adjusted surface by using light buffing strokes at slow speed (less than 10,000 rpm).

Keep the paste moist throughout the polishing procedure. After polishing remove any residual paste with water spray.

Dura-Polish ■ Dura-Polish DIA

Polishing paste system

Dura-Polish is impregnated with up to 73 % by weight with aluminum oxide particles, and efficiently achieves a very homogeneous surface when prepolishing composite, alloys, denture acrylics and PMMA, especially in difficult to reach areas.

Dura-Polish DIA is filled to an extremely high level (67 % by weight) with industrial diamond particles. Due to the ultra fine particle size of < 1 µm this polishing paste achieves an excellent and consistent high gloss with composite and porcelain.

Indications

■ DURA-POLISH

Prepolishing and polishing of composite, alloy and denture acrylics

■ DURA-POLISH DIA

High-lustre polishing of composite and porcelain, zirconium and alloys

Min⁻¹ Max. 10,000
Not suitable for intraoral use!

BENEFITS

Adhesive character of paste ensures maximum surface contact

Viscosity of paste minimises splattering

Economical to use

Excellent polishability

PN	Quantity	Product
0552	1 jar	Dura-Polish, 20 g
0554	1 jar	Dura-Polish DIA, 5 g

Merssage ■ Pressage

Prophylaxis pastes for all indications

These prophylaxe pastes are available in different kinds. The fluoride containing Merssage pastes remove plaque and provide a smooth and polished tooth surface. The non-fluoride Pressage paste is designed for cleaning tooth surfaces before bleaching and the application of etchants, bonding agents, and sealants.

Indications

■ MERSSAGE REGULAR

RDA 170-180, with fluoride

Merssage Regular – with peppermint taste – is used for the removal of discolouration and at the beginning of the prophylaxis treatment, as well as for polishing teeth surfaces after the removal of orthodontic appliances.

■ MERSSAGE FINE

RDA 40-50, with fluoride

Merssage Fine – with lemon taste – is used for the removal of plaque and extrinsic stains on the tooth surfaces and for polishing after scaling or bleaching.

■ MERSSAGE PLUS

RDA < 10, with fluoride

Merssage Plus – with orange taste – is used for polishing after scaling or bleaching, for prevention of reattached stains as well as for cleaning of restorative materials and polishing the surface.

■ PRESSAGE

RDA 170-180, without fluoride

The tasteless Pressage paste is used for the surface cleaning before bleaching or application of etchants, bonding agents or fissure sealants. It does not contain fluoride, as this can weaken the bonding strength and the bleaching effect.

PN	Quantity	Product
0572	1 tube	Merssage Regular, 40 g
0573	1 tube	Merssage Fine, 40 g
0575	1 tube	Merssage Plus, 38 g

Min⁻¹ Max. 2,000
Do not operate with water spray!

Robot Points FG Diamonds

Precision diamonds for cavity and crown stump preparation and minimally invasive therapy

Exact dosages of diamond particles are evenly distributed on a one piece shank of hardened stainless steel. The ideal relation of the protruding and embedded part of the diamond particle ensures a long lasting low vibration performance.

Grit sizes

Besides the standard grained Robot Points (S, without shank marking), there is a range of super coarse (X, black banded shank), coarse (C, green banded shank), fine (F, red banded shank) and superfine (V, yellow banded shank) diamonds.

Minimally invasive diamonds

Robot Points for minimally invasive therapy were developed for the maximal protection and preservation of healthy tooth substance. Six special shapes are available for the fine preparation of wedge shaped defects up to occlusal cavities.

The differently shaped, delicate abrasives have a very homogeneous grit (100 µm, standard). The very short head length (0.7 - 2.0 mm) and a slender shank neck ensure an unimpeded view on the prepared surface. For the precise preparation in the sense of the MiCD concept these Robot Points are used at a maximum speed of 300,000 rpm.

Min⁻¹ Recom. 120,000 - 450,000 / CP 0 - 0.8 N

BENEFITS

Exact, even distribution of diamond particles

Five grit sizes: super coarse, coarse, standard, fine, superfine

Shank and working end are produced from a one-piece blank

Long-lasting

Precise concentricity

Indications

CHAIRSIDE

For cavity and crown preparation as well as adjusting direct restorative materials

IN THE DENTAL LABORATORY

E. g. fine adjustments to fully anatomical designed occlusal surfaces of porcelain crowns, inlays, onlays; finishing of approximal areas

Range of Application

Suitable for the following materials:

Tooth enamel, porcelain, composite, filling materials such as GIC, cements

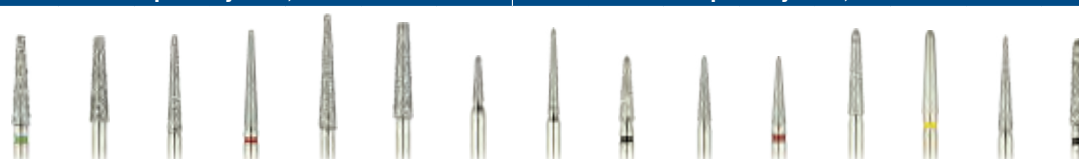

info

Robot Points should always be used intermittently with low pressure and water cooling.

The colour coding of the order number indicates the individual maximum speed:

Cyan	max. 450,000 rpm
Blue	max. 300,000 rpm
Orange	max. 160,000 rpm
Violet	max. 120,000 rpm

Six special shapes are available for minimally invasive treatment. They can be used for the fine preparation of wedge shaped defects up to occlusal cavities.

All Ceramic Preparation Kit

Preparation system for all-ceramic restorations

The assortment of the 17 instruments is ideally suited for the preparation of the anterior area, for the preparation of premolars and molars as well as the inlay and facet preparation. The shapes of the abrasives are optimally designed for the aspired preparation, ensuring a shape congruent performance.

Contents

Robot Points - 1 each:

808V-1, 0825-1, 825V-1, 0826-1, 826V-1, 0833-1, 833V-1, 0836-1, 836V-1, 0839-1, 839V-1, 0893-1, 893V-1, 0896-1, 0897-1, 0899-1, 899V-1

CAD/CAM Preparation Kit

Preparation kit for all-ceramic and hybrid ceramic CAD/CAM restorations

The attractively designed assortment contains eleven diamond coated and shape adjusted rotary instruments for the quick and easy conservative preparation as well as for the preparation of all-ceramic or hybrid ceramic restorations; anterior and posterior. The bur stand is made from stainless steel, hence it is non-corrosive and can be sterilised.

Hybrid Points

Diamond points for cavity and crown stump preparation

Hybrid Points are the result of a development process combining both diamond and abrasive technologies. The special coating technology with natural diamond particles in standard grit guarantees a high cutting performance with a low contact pressure and secure cooling. Twelve different shapes and sizes are available for the different preparation steps.

BENEFITS

Exact, uniform distribution of the diamond particles

Sturdy stainless shank

Low vibration grinding

High grinding performance with little contact pressure and secure cooling

Min⁻¹ Recom. 300,000 - 450,000 / CP 0 - 0.8 N

PN Quantity Product

0901-1-0923-1	6 pcs.	Hybrid Points, FG shank
0900	1 pc.	Hybrid Points Kit

The instruments are individually packed in plastic containers.

The Hybrid Points Kit contains 12 Hybrid Points and 10 T&F Hybrid Points.

Indications

CHAIRSIDE

Cavity and crown stump preparations

Range of Application

Suitable for the following materials:
Tooth enamel, porcelain

info

The colour coding of the order number indicates the individual maximum speed:

Cyan	max. 450,000 rpm
Blue	max. 300,000 rpm

T&F Hybrid Points

Ultra-fine diamonds for finishing of tooth enamel, porcelain and composite

T&F Hybrid Points with their ultra fine diamond particles fulfill the requirements of modern, aesthetic dentistry regarding minimal corrections and best preparation for polishing.

The instruments are available in ten different sizes and shapes for the different preparation steps and individually packed in plastic containers.

TPE Diamonds

Tissue-protective, end-cutting diamonds for the subgingival shoulder preparation

A significant feature of these diamonds is the uncoated bevelling to the cutting surface, designed to avoid lacerating the adjacent tissue or undercutting the axial wall during a shoulder preparation. TPE Diamonds (Tissue-Protective, End-Cutting) are available in normal head length with fine and coarse grit and in short head length with coarse grit.

BENEFITS

- Tissue-protective, end-cutting
- Exactly centred
- Long lasting
- Consistent cutting performance

Indications

CHAIRSIDE

- Coarse (C – no shank marking):
for rapid reduction of the shoulder margin into the gingival sulcus
 - Fine (F – red banded shank):
for smooth finishing of the shoulder margin, finishing sub gingival shoulder preparation
- The short head (in coarse grit only) is recommended when accessibility is limited.

Range of Application

Tooth enamel: shoulder preparation

The TPE Diamonds Kit contains nine selected diamonds.

Gingi Curettage Diamonds

For crown and bridge preparation and grinding of tooth stumps

The gold coloured standard grit FG diamonds are designed to establish a chamfered finish to the tooth surface in crown and bridge preparations, giving an ideal profile for precise impression taking. They are made with a 3° axial side taper, a 45° tip angle to the axis and a 1.52 mm point radius.

The Gingi Curettage Diamonds Kit contains the six most popular shapes C062-1, C081-1, C083-1, C084-1, C102-1, C103-1.

CeraMaster Finishing & Polishing Kit

For finishing and polishing of all porcelain restorations

The kit includes all necessary rotary instruments for the systematic finishing and polishing of porcelain restorations in the dental practice.

Contents

Dura-Green: 1 each CN1, FL2, RE1
 Dura-White: 1 each CN1, FL2, RE1
 CeraMaster Coarse: 1 each knife, cup, minipoint
 CeraMaster: 1 each knife, cup, minipoint

PN	Quantity	Product
0332	1 pc.	CeraMaster Finishing & Polishing Kit, CA shank

Porcelain Veneer Kit

Assortment for all working steps from preparation to lustre finish

The Porcelain Veneer Kit contains all necessary rotary instruments for the preparation of the tooth, for fine adjustments to porcelain and the final super polish to a high gloss.

Contents

Robot Points, standard: 1x 0835-1
 Robot Points, fine: 1 each 835F-1, 883F-1
 T&F Hybrid Points: 1 each 7404, 7803, 7901
 Dura-White: 1 each FL2, RE1
 Ceramisté Standard: 1 each knife, wheel
 Ceramisté Ultra: 1 each knife, wheel, cup
 Ceramisté Ultra II: 1 each knife, wheel, cup

PN	Quantity	Product
0300	1 pc.	Porcelain Veneer Kit, CA-FG shank combination

Porcelain Laminate Polishing Kit

Systematic polishing of porcelain and enamel in three steps

With the polishers Ceramisté Standard, Ceramisté Ultra and Ceramisté Ultra II this kit offers the proper instruments for each working step from prepolishing to high-gloss polishing. The assortment of Ceramisté polishers with midpoint and cup shapes is ideal for harmonising the marginal seals between porcelain and tooth enamel. The kit is also suitable for polishing porcelain veneers.

Contents

Ceramisté Standard: 4 each cup, midpoint

Ceramisté Ultra: 2 each cup, midpoint

Ceramisté Ultra II: 1 each cup, midpoint

PN	Quantity	Product
0317	1 pc.	Porcelain Laminate Polishing Kit, CA shank
0318	1 pc.	Porcelain Laminate Polishing Kit, FG shank

Enamel Adjustment Kit

For adjustment and systematic polishing of tooth enamel and porcelain

The Enamel Adjustment Kit is indispensable in the dental practice for very fine adjustments of natural dentition or porcelain restorations and subsequent high-gloss polish in the patient's mouth. The choice of shapes is particularly well suited for working on difficult to reach areas, such as interproximal areas or occlusion surfaces.

Contents

Dura-White: 1 each FL2, RD1, TC1

Ceramisté Standard: 1 each knife, wheel, bullet

Ceramisté Ultra: 1 each knife, wheel, bullet

Ceramisté Ultra II: 1 each knife, wheel, bullet

PN	Quantity	Product
0307	1 pc.	Enamel Adjustment Kit, CA shank

Porcelain Adjustment Kit

For polishing of porcelain restorations in the dental laboratory or chairside

This kit contains all instruments for splitter free corrections of ready to place porcelain restorations and polishing to high gloss without an additional firing cycle.

Contents

Dura-White: 1 each CN1, FL3, RE1
 Ceramisté Standard: 1 each KN7, PC2, WH6
 Ceramisté Ultra: 1 each KN7, PC2, WH6
 Ceramisté Ultra II: 1 each KN7, PC2, WH6

PN	Quantity	Product
0301	1 pc.	Porcelain Adjustment Kit, HP shank

Amalgam Polishing Kit

Polishing kits for amalgam and precious alloys

The kits are available in contra angle or friction grip shank and contain all important instruments for all polishing steps up to high gloss.

Contents

Cup: 3x Brownie, 2x Greenie, 1x Supergreenie
 Minipoint: 3x Brownie, 2x Greenie, 1x Supergreenie

PN	Quantity	Product
0308	1 pc.	Amalgam Polishing Kit, CA shank
0309	1 pc.	Amalgam Polishing Kit, FG shank

GIC Polishing Kit

For finishing and polishing of glass ionomer and compomer restorations

The kit contains all important instruments for finishing and polishing restorations from conventional glass ionomer cements, resin modified glass ionomers and compomers.

Contents

T&F Hybrid Points: 1 each 7406, 7803
 Dura-White: 1 each CN1, FL2, RD1, RD2
 CompoSite: 1 each cup, knife, midipoint
 Ceramisté Ultra II: 1 each cup, knife, midipoint

PN	Quantity	Product
0323	1 pc.	GIC Polishing Kit, CA-FG shank combination

Composite Technique Kit

For composite restorations

Fast, easy and without additions CompoSite and CompoSite Fine polish the entire surface structure of a white filling in only two steps. Simultaneously the surface gets sealed to prevent bacterial infiltration.

Contents

Dura-White: 1 each CN1, FL2
 CompoSite: 1 each bullet, knife, wheel, disk, cup, midipoint, pear-point, IC
 CompoSite Fine: 1 each bullet, knife, wheel, disk, cup, midipoint, pear-point, IC

PN	Quantity	Product
0322	1 pc.	Composite Technique Kit, CA shank

Composite Finishing Kit

For reducing and finishing of composite restorations

The kits are ideally suited for reducing and finishing composite fillings, also in interproximal and subgingival areas.

Contents

Dura-Green: 3 each CN1, FL2

Dura-White: 3 each CN1, FL2

PN	Quantity	Product
0306	1 pc.	Composite Finishing Kit, CA shank
0302	1 pc.	Composite Finishing Kit, FG shank

Composite Polishing Kit

For finishing and polishing of composite restorations

The kit contains all instruments for contouring, finishing and polishing all types of composite restorations: Dura-Green stones to reduce excess material, Dura-White stones for finishing, CompoSite polishers for prepolishing and CompoSite Fine instruments for high gloss without damage to the enamel.

Contents

Dura-Green: 1 each CN1, FL2

Dura-White: 1 each CN1, FL2

CompoSite: 2 each bullet, knife, wheel

CompoSite Fine: 1 each cup, disk

PN	Quantity	Product
0310	1 pc.	Composite Polishing Kit, CA shank

CompoMaster Finishing & Polishing Kit

For systematic finishing and polishing of composite restorations

The kit contains all the necessary rotary instruments for systematic finishing and polishing of composite restorations in the dental practice.

Contents

T&F Hybrid Points: 1 each 7106, 7406, 7901, LT1
 CompoMaster Coarse: 1 each knife, cup, minipoint
 CompoMaster: 1 each knife, cup, minipoint

PN	Quantity	Product
0331	1 pc.	CompoMaster Finishing & Polishing Kit, CA-FG shank combination

Ceramage Finishing & Polishing Kit

For all micro hybrid composites with a high porcelain filler content

The assortment contains all necessary rotary instruments for finishing and polishing of Ceramage and highly filled micro hybrid composites. The selection of shapes is also suitable for working on occlusal or interproximal areas.

Contents

Robot Carbide Fissure Bur: 1x SH97
 Dura-Green: 1 each IC9, PC1, WH6
 CompoMaster Coarse: 1 each bullet, KN7, WH6
 CompoMaster: 1 each bullet, KN7, WH6

PN	Quantity	Product
0333	1 pc.	Ceramage Finishing & Polishing Kit, HP shank

Mandrels

Mandrels for unmounted wheels and disks

The mandrels from stainless steel are available with hand piece, contra angle and friction grip shank (HP, CA, FG). Single use resin mandrels are available in contra angle. Further information regarding handling can be found on page 8.

PN	Quantity	Product
5011	12 pcs.	HP mandrel for all unmounted wheels and disks
0435	6 pcs.	CA mandrel for OneGloss polishers
0439	6 pcs.	CA mandrel for Super-Snap disks, Super-Snap SuperBuff, Super-Snap Buff Disks
0438	6 pcs.	FG mandrel for Super-Snap disks, Super-Snap SuperBuff, Super-Snap Buff Disks
0440	100 pcs.	CA mandrel, resin, for Super-Snap disks

Dressing Tools

For shaping and cleaning of abrasives and polishers

For the precise work with abrasives and polishers personalised shapes are often preferred to the existing range. Also sharp edges or curves are worn down, so that the instrument is not longer used, even though there still is enough material on the shank.

The diamond impregnated Abrasives Dresser for ceramic bonded stones and polishers and the SHOFU Adjuster from aluminium oxide for the Dura-Green DIA instruments enable easy shaping of edges and curves, as well as cleaning of the instruments.

PN	Quantity	Product
0781	1 pc.	Abrasives Dresser, 100 x 15 x 4 mm
0504	1 pc.	SHOFU Adjuster, 85 x 17 x 10 mm

Bur Stands

For systematic storage and preparation in the dental practice

The Bur Block and the Bur Station II are ideal bur stands for the storage of contra angle (CA) and friction grip (FG) instruments. The organisers are handy and aid easy transportation of up to 12 FG and 6 CA instruments. Depending on the indication, various individual sets can be assembled.

Bur Block

The lockable lid protects the instruments against spillage and contamination, the open sides ensure total sterilisation and disinfection of up to 18 instruments (12 FG and 6 CA). Depending on the procedure (e.g. cavity preparation), individual colour coded instrument sets can be assembled.

- Aluminium housing with lockable lid
- 5 colours: black, blue, gold, green, red
- Dimension: 4.4 x 3.1 x 2.6 cm
- For 12 FG and 6 CA instruments

Bur Station II

The Bur Station II for storage and sterilisation of up to 17 instruments (11x FG and 6x CA) is made from multi functional resin, and offers a high thermal resistance (< 140 °C), thus being very durable and resistant to chemicals. It is available in two colours.

- Multi-functional resin stand with lockable lid
- 2 colours: yellow, light blue
- Dimension: 4.2 x 2.2 x 3 cm
- For 11 FG and 6 CA instruments

BENEFITS

Can be closed securely

Can be disinfected and sterilised in an autoclave

PN	Quantity	Product
92BK	1 pc.	Bur Block, black
92BL	1 pc.	Bur Block, blue
92GL	1 pc.	Bur Block, gold
92GN	1 pc.	Bur Block, green
92MN	1 pc.	Bur Block, red
0796	1 pc.	Bur Station II, yellow
0797	1 pc.	Bur Station II, light blue

Instructions for use and safety precautions for rotary instruments in dental applications

All rotary instruments from SHOFU Dental GmbH have been developed for their specific applications. Rotary instruments for dental applications may only be used by doctors and other specialist who are familiar with the use of these instruments due to their professional education or experience in their practical use.

Improper use may contribute to premature wear of the instruments, lead to poor results and pose a danger to the patients and the operators.

Intended application

■ Only technically and hygienically flawlessly, maintained and cleaned turbines as well as handpieces and contra-angle handpieces may be used. Until their first use, they should be stored in the original packaging, at room temperature and sealed against dust and moisture.

■ Prior to the first use on the patient, the rotary instruments should be disinfected, cleaned and – if appropriate – sterilised. Damaged, deformed or unbalanced instruments should be immediately disposed of and no longer used.

■ The instruments should be inserted as far as possible and brought to the required rotational speed prior to applying to the object surface. Avoid tilting or levering the instruments, as this may increase the risk of breakage.

■ Depending on the type of application, protective glasses should be used. During the application of diamond cutting tools, the use of a disc guard is recommended. When processing dry materials, you should use a dust suction device to reduce the formation of dust. Unprotected contact with the instruments by the operator should be avoided.

Rotational speeds

■ The recommended speed range on the packaging and the package insert should be strictly adhered to. Adherence to the recommended speed range ensures optimal working results. Exceeding or going below this speed range may lead to inferior work results.

■ Non-adherence to the maximum permissible rotational speed results in increased material loss and safety hazard for the operators and the patients. Long and pointed instruments tend to oscillate when exceeding the maximum permissible rotational speed, which may lead to the destruction of the instrument.

Pressing forces

■ Excessive pressing forces should be strictly avoided as they may damage the working sections of the instruments resulting in chipping of the blades and at the same time leading to excessive heat development.

■ In the case of grinding instruments, excessive pressing forces may lead to tearing out of the abrasive grains or loading of the instrument and increased heat development.

■ Excessive pressing forces may also lead to injury of the dental pulp due to overheating or to undesirable rough surfaces due to chipped blades. Even breakage of the instrument cannot be excluded.

Cooling

■ In order to avoid excessive heat development during preparation, sufficient air / water cooling (at least 50 ml / min) should be utilised. Insufficient cooling may lead to irreversible damage of the tooth / bone and / or tissue.

Reconditioning, storage, disinfection, cleaning and sterilisation

■ Used instruments must always be disinfected prior to cleaning. All instruments and components are packaged under non-sterile conditions and must be sterilised according to the purpose of use prior to the application. In case of improper cleaning and sterilisation of the instruments, the patient may be infected with harmful germs.

■ All materials can be sterilised in accordance with DIN EN 554 and DIN EN 13060 – moist heat sterilisation in the steam autoclave (at 134 °C for a minimum residence time of 3 minutes with fractioned pre-vacuum and at least 10 minutes drying period).

■ Please adhere strictly to the operating instructions from the instrument manufacturer during sterilisation. Prior to sterilisation, the instruments should be sufficiently disinfected and cleaned. The disinfection can be carried out manually or mechanically. The manual cleaning/disinfectant suitability of SHOFU instruments has been validated and documented.

■ Use a suitable brush to thoroughly remove surface soiling under flowing water. Place the instruments in a holding device (such as Bur Block, SHOFU) and:

→ put **carbide and diamond instruments** into an **ultrasound bath**,

→ put **abrasive stones and polishers** into a **thermal bath**

that are filled with the required amount of water including 2% of the cleaning and disinfection chemicals Stammopur DR8 (Dr. H Stamm GmbH, Berlin). The exposure period is 10 minutes at a bath temperature of 45 °C.

■ After the exposure period, thoroughly rinse off with water and dry with compressed air. Then make a visual inspection for cleanliness and integrity. If residual contamination can still be seen, repeat cleaning and chemical disinfection until the contamination is no longer visible.

■ The suitability of SHOFU instruments for mechanical cleaning and disinfection in standard disinfectants is validated and proven: cleaning / disinfection machine MIELE G7735 CD with an alkaline detergent (0.5 % Neodisher FA, Dr. Weigert) without pre-cleaning and using the Bur Block (SHOFU) with the VARIO TD programme.

■ As a matter of principle, polishers are not suitable for disinfection at temperatures over 135 °C. After cleaning, the instruments should be thoroughly rinsed with water and immediately dried. Contact between the instruments during the cleaning / disinfection process may cause damage and should thus be avoided.

■ Use of protective gloves during the cleaning of contaminated instruments is highly recommended. The instructions for use, reaction time and suitability of disinfectants and detergents for certain types of instruments should be obtained from the instructions of the manufacturers of these agents and strictly adhered to.

■ We also remind you of the list of disinfection methods tested in accordance with the guidelines for the testing of chemical disinfectants and proven to be effective by the German Association for Hygiene and Microbiology (DGHM). The same applies to the list of the Robert Koch Institute (RKI). Information on suitable disinfection agents and methods is also available on the internet at www.rki.de or www.dghm.de.

■ The instruments should be stored in suitable, hygienic containers. The same applies to sterilised instruments. They should be stored and sealed against dust, moisture and recontamination. The maximum storage period must not be exceeded.

■ The above-mentioned instructions have been validated as "suitable" by the manufacturer of the medical equipment for the preparation of that equipment for reutilisation. The onus is on the operator to ensure that the preparation for re-use performed in the processing plant uses appropriate equipment, materials and personnel produces the required results. This usually requires validation and continuous monitoring of the process. Similarly, any deviation from the supplied instructions by the processing person should be carefully evaluated to ensure effectiveness and avoid any potentially negative consequences.

■ On the basis of the respective case of application as well as the possible wear of the instruments, the doctor or specialist using these instruments is solely responsible for the decision of reusing the instrument set and the frequency of use. In doubt, the instrument should always be prematurely disposed of and replaced. Rotary instruments are subject to wear. As a result of this, the functioning guarantee for all rotary tools expires after frequent use.

FILLING AND LUTING

BEAUTIFIL: A System for All Indications and Needs

Beautifil is a complete system of light-cured composite materials for all dental professionals who set great store by aesthetics, safety and efficiency in restorative dentistry.

Before restoration

After restoration

Whether small cervical or large Class I and II cavities, whether anterior or posterior teeth, whether flowable, packable or injectable: The Beautifil series of direct composite resins offers practitioners a modern and reliable restorative system covering all clinical indications of conservative/restorative dentistry.

This universal composite system not only shows excellent aesthetic and mechanical properties, but also helps to protect the tooth thanks to its bioactive filler particles.

Benefits of the BEAUTIFIL series

- Multifunctional system for countless applications
- Sophisticated Giomer-based shade and material system
- Various consistencies and delivery forms
- Natural light transmission/diffusion and shade matching
- Anti-plaque effect
- Sustainable fluoride release and recharge
- Remarkable radiopacity
- High abrasion and fracture resistance

All Beautifil products are multifunctional composites of the Giomer category, featuring SHOFU's proprietary S-PRG filler.

This filler allows the restoratives to recharge and release fluoride and other ions in the oral environment – for effective and sustainable protection against recurrent caries by tooth structure remineralisation, plaque inhibition and acid neutralisation.

Whether repairing, masking or lining, whether small cavities or large restorations: Beautifil is an all-round modular restorative system allowing users to flexibly choose from six well-matched composite lines.

Beautifil II (with S-PRG filler): sporadic plaque formation

Conventional composite resin (without S-PRG filler): extensive plaque formation

info

The special material properties of Beautifil have been proven in a 13-year clinical study.

"A clinical evaluation of a giomer restorative system containing surface prereacted glass ionomer filler: Results from a 13-year recall examination"

Gordan V. V., Blaser P. K., Watson R. E., Mjör I. A. et al.

J Am Dent Assoc 145(10): 1036-1043 (Oct. 2014)

This study and a bibliography of other evaluations and publications are available on request.

„In my practice I often use composites to reconstruct severely abraded or eroded teeth and restore their natural functions and aesthetics. [...] Beautifil by SHOFU has long been my favourite system, because of its great ease of use, natural aesthetics and, above all, high strength and durability. [...]"

SHOFU's Beautifil system makes restorative dentistry much more straightforward and reliable – no matter how experienced a dentist may be in the use of composites."

Dr. Hans van Pelt, Rotterdam, Netherlands

Enamel shell created with Beautifil II Enamel HVT

Mamelon structure created with Beautifil II A30

Dentine build-up at the incisal edge with Beautifil II A2 und A3

Outer enamel layer created with Beautifil II Enamel

BEAUTIFIL II LS (Low Shrinkage)

Low shrinking pasty composite for anterior and posterior restorations

Beautifil II LS (Low Shrinkage) has been developed based on the proven Beautifil II; it guarantees dentists low shrinkage and maximum aesthetics. The most remarkable feature of this pasty universal composite is its unique polymerisation shrinkage of just 0.85 percent by volume. In addition, its polishability is excellent, and it optimally matches the shade of the natural tooth structure.

The material contains bioactive S-PRG fillers acting as a sustainable source and reservoir of fluoride at the same time; they durably release and recharge this trace element depending on its concentration in the mouth – for a restorative treatment characterised by long-term stability and caries prevention. The use of Beautifil II LS in combination with the all-in-one adhesive BeautiBond, which is well-matched to the system, will further enhance the caries-preventive effect of the S-PRG filler technology.

Beautifil II LS features a well-balanced chameleon effect in both dentine and enamel, thanks to its natural light reflection. Furthermore, this light-cured universal composite can easily and quickly be polished to a long-lasting surface gloss.

BENEFITS

- Low shrinkage (< 1 %) and shrinkage stress
- Excellent polishability and long-lasting gloss
- High abrasion resistance and antagonist-friendly surface hardness
- Natural light transmission and diffusion
- Sustainable fluoride release and recharge
- Shade range identical with Beautifil II

PN	Quantity	Product
Y2270-Y2283	4 g	Beautifil II LS - syringe
Y2284-Y2297	0.25 g	Beautifil II LS - tips, 20 pcs.

Indications

- Direct anterior and posterior restorations
- Repairs of restorations and dentures

Physical Properties

- Polymerisation shrinkage: 0.85 % by volume according to ISO 17304:2013(E)
- Shrinkage stress: 10.9 MPa
- Compressive strength: 364 MPa
- Flexural strength: 117 MPa
- Vickers hardness: 46 HV
- Wear: 1.41 % by wt.
- Filler load: 82.9 % by wt.
- Depth of cure: 2.4 mm
- Radiopacity: 2.0 Al:mm

BEAUTIFIL II

Continually fluoride releasing aesthetic restorative material

Beautifil II convinces with its aesthetic appearance with excellent colour harmonisation, exceptional handling properties and its anti-plaque effect. Due to its bioactive S-PRG filler this composite of the Giomer category has the property to release and recharge fluoride, based on the concentration of fluoride in the mouth.

The patented filler technology integrates the light transmission and diffusion properties of natural teeth, thus allowing virtually invisible restorations with even one layer.

The hardness of the glass filler used as raw material of Beautifil II is similar to that of enamel and is antagonist-friendly. The material is therefore suitable for both anterior and posterior teeth.

BENEFITS

- Light transmission and diffusion properties of natural teeth
- Colour stability
- Anti-plaque effect
- Tooth-like fluorescence
- Exceptional radiopacity
- Sustainable fluoride release and recharge
- Reliable strength and longevity

BEAUTIFIL II (Continued from page 59)

Continually fluoride releasing aesthetic restorative material

Indications

Direct restorations that require optimal aesthetics and biocompatibility, like:

- Restorations of Class I - V cavities
- Restoration of cervical erosion and root caries
- Repair of fractured incisal edges
- Veneers and posts
- Direct cosmetic tooth corrections

BEAUTIFIL II - Sets and Single Components

BEAUTIFIL II Gingiva & Enamel

Gingiva and Enamel shades

The two new components added to the Beautifil composite line allow dentists to restore pink-white aesthetics and produce truly lifelike restorations.

The five Gingiva shades, which can be blended with each other, help to create true-to-nature soft tissue areas characterised by great depth and invisible transitions to the tooth. The four Enamel shades are ideal for highly aesthetic anterior restorations. They allow users to easily create polychromatic restorations and invisibly repair restorations and dentures.

Clinical case, before and after restoration with BEAUTIFIL II Gingiva Light Pink

Beautifil II Gingiva

For the reproduction of gingival areas

- Indicated in cases of gingival recession, exposed abutments and crown margins, root erosion and missing papillae
- Shades can be layered and blended for aesthetic solutions without the need for surgery
- Perfect for Class V restorations

Clinical case, before and after restoration with Beautifil II Enamel

Beautifil II Enamel

For direct anterior restorations

- Polychromatic restorations thanks to chameleon effect
- Cost-effective alternative to porcelain veneers
- Highly aesthetic restorations achievable by layering and blending the shades
- Based on porcelain shade concept – for easy shade matching

BEAUTIFIL Flow Plus

Injectable anterior and posterior filling composite

Beautifil Flow Plus combines the application properties of a flow with the stability, durability and aesthetic of packable composites. It is approved for every classification – including occlusal surfaces and proximal margins. With improved handling properties allowing an injectable application, creating posterior restorations has never been easier. Moreover, the ability of Beautifil Flow Plus to release and recharge fluoride and its resistance to bacterial colonisation makes it ideal for the prevention of secondary caries.

Beautifil Flow Plus is available in two viscosities, "F00" is extremely stable and "F03" is moderately flowable.

Both are suited to the known flow indications, but as well to the occlusion-bearing areas which means they can also be used for class I and II fillings. With the 360° rotary finger grip and a replaceable fine cannula the Flow Plus composites are easily applied directly out of the syringes.

A wide range of colours and various opacities are available for aesthetic restorations in single and multi shade technique.

BENEFITS

- Approved for restorations of all cavity classes
- High tensile and flexural strength
- "Cone technique" application
- Natural aesthetics with chameleon effect
- Sustainable fluoride release and recharge
- Exceptional radiopacity

Indications

- F00 – ZERO FLOW**
Shaping of occlusal anatomy, marginal ridges and intricate surface details, restorations of all cavity classes
- F03 – LOW FLOW**
Restoration of pits, gingival boxes for surface modification; serves as a baseline

F00 - absolutely stable (Zero Flow)

BEAUTIFIL Flow

Flowable filling material for aesthetic restorations

Beautifil Flow is available in the two distinctive viscosities F02 (low flow) and F10 (high flow), its shades harmonise perfectly with Beautifil II.

The combination with the adhesive system FL Bond II ensures a secure, highly fluoride releasing and aesthetic material system. A syringe specially developed for the dentist's needs assures the simple and hygienic application of the material without oozing of excess paste.

Indications

- Small, shallow cavity restorations (class I to III and class V cavities)
- Deciduous restorations
- Base / liner under restorations
- Repair of fractured porcelain and composite restorations
- Fissure sealant (see page 85)
- Undercut blackout

BEAUTIFIL Opaquer

Fluoride releasing flowable opaque

Beautifil Opaquer is used for masking discolourations, staining and metal colour as well as pulp capping. The flowable composite is available in the two shades “Universal Opaque” and “Light Opaque” and offers high coverage even with a thin layer.

Indications

Masking discolourations, spots, alloys and pulp capping

BEAUTIFIL-Bulk

One bulk-fill system - two viscosities for all indications of conservative treatment

Packable or flowable: with the development of the Beautifil-Bulk system dentists can place increments up to 4 mm in thickness. This system features not only low shrinkage stress, but also effective optical diffusion processes for superior shade matching and aesthetics.

All Beautifil-Bulk products are multifunctional Giomer composites with bioactive filler particles, characterised by sustainable recharge and release of fluoride, anti-plaque effect, acid neutralisation and tooth structure remineralisation. The special filler structure and the glass core enable a natural light transmission and -diffusion and a balanced chameleon effect in the dentine and enamel area. Hence exceptionally aesthetic restorations can be achieved even with one shade only.

BENEFITS

Two viscosities - packable and flowable

Low polymerisation shrinkage and shrinkage stress

Excellent depth of cure for increments up to 4 mm in thickness

Optimal shade match (chameleon effect)

High radiopacity

Indications

■ The slightly viscous **Beautifil-Bulk Flowable** can be easily and precisely applied directly from the syringe. It is very suitable as base liner for class I and II cavities, or as liner and filling material for small posterior cavities.

■ **Beautifil-Bulk Restorative** is a packable, excellent sculptable material and stands occlusal stress up to 340 MPa. Its pasty, non sticky consistency makes it ideal for direct posterior restorations.

BeutiCem SA

Fluoride-releasing self-adhesive resin cement

BeutiCem SA is a universally usable, self-etching and self-adhesive resin cement capable of releasing and recharging fluoride thanks to its S-PRG filler particles. This dual-cure luting material easily, quickly and reliably cements all indirect restoratives and all types of restorations suitable for adhesive cementation to natural tooth structure, without the need for separate phosphoric acid etching, priming or bonding of enamel and dentine.

Consistant mixing quality

BeutiCem SA is available in two colours, Clear and Ivory, and comes in a dual-barrel syringe with auto-mix tips, consistently mixing the cement at the correct ratio and without any air inclusions.

The ideal viscosity of this non-sticky cement ensures controlled delivery and accurate restoration placement.

BENEFITS

- Durable bond to a wide range of materials
- No need for separate phosphoric acid etching, priming or bonding of enamel and dentine
- Outstanding physical properties
- High translucency for aesthetically challenging cases
- Low layer thickness (11.8 µm)

Indications

- All-ceramic inlays, onlays, crowns and bridges
- Dentures made with precious, semiprecious and non-precious alloys, also with titanium
- PFM crowns and bridges
- CAD/CAM restorations
- Indirect-composite inlays, onlays, crowns and bridges
- All-ceramic, composite and metal restorations on implant abutments
- Various kinds of metal and composite post & cores

Thanks to its thixotropic flow behaviour, the material forms an even, bubble-free layer which is only 11.8 µm thick, making restoration margins virtually undetectable.

Careful control of the refractive index provides outstanding translucency for aesthetically challenging cases. And excellent radiopacity facilitates diagnoses in future examinations.

PN	Quantity	Product
3213	5 ml	BeutiCem SA, "Clear" auto-mixing, 10 mixing tips
3214	5 ml	BeutiCem SA "Ivory" auto-mixing, 10 mixing tips

ResiCem

Universal dual-cure cementation system

ResiCem is a radiopaque, dual-cure, resin-based, adhesive cementation system with self-conditioning Primers A and B, suitable for all types of indirect restorative materials.

ResiCem comes in a convenient 5 ml dual-barrel syringe with mixing tips for consistently perfect dosing, mixing and dispensing onto or into the restoration. Thanks to its advantageous consistency, the cement paste flows very easily even under light pressure, which facilitates the placement of the restoration into its final position. The material can be applied in films as thin as nine micrometres, so that the cementation will not cause any bite elevation or compromise the marginal integrity initially achieved.

Immediately after placing of the restoration

2 minutes after placing of the restoration

BENEFITS

Self-conditioning Primers A and B

Efficient handling

Very good marginal integrity

Consistently high bond strengths – irrespective of the curing method used

Easy application and excess removal

PN	Quantity	Product
3220	1 pc.	ResiCem Basic Kit ResiCem paste "Clear", auto-mixing, 2x 5 ml, Primer A 3 ml, Primer B 2.5 ml, Microtip fine (1 handle, 50 tips), 20 pcs. mixing tips, dispo dish
3221	15 ml	ResiCem paste "Clear", auto-mixing, 10 mixing tips
3222	15 ml	ResiCem paste "Ivory", auto-mixing, 10 mixing tips
3227	3 ml	ResiCem Primer A
3228	2.5 ml	ResiCem Primer B
Y0005	5 ml	HC Primer (see page 73)
Y0006	5 ml	SHOFU MZ Primer Plus (see page 72)
1740	5 ml	M.L. Primer (see page 74)
3232	5 ml	AZ-Primer (see page 74)
3234	5 ml	Porcelain Primer (see page 75)

Indications

■ Adhesive cementation of alumina and zirconia restorations, porcelain or indirect composite veneers, crowns, bridges, inlays, onlays and indirect metal-reinforced restorations

■ Cementation of various types of posts or core build-up materials

FL-Bond II

Self-etching fluoride releasing bonding system

FL-Bond II is a self-etching fluoride releasing two-step adhesive system which features an excellent bond to both enamel and dentine and provides a secure marginal seal. The system is characterised by its excellent handling and enhanced biocompatible properties. The moderately viscous consistency of FL-Bond II allows a convenient application and is particularly stable with sloping cavity walls. This guarantees an even film thickness at all preparation surfaces and a stable bond strength.

Indications

- Adhesive bonding of any composite to tooth structure
- Pre-treatment of the tooth structure prior to the application of resin cements
- Repair of restorations

BENEFITS

- Simple and quick 2-step handling
- Optimal viscosity and adhesion
- Radiopacity for accurate diagnostics
- Fluoride release and recharge
- Durable bonding strengths

PN	Quantity	Product
1306	1 pc.	FL-Bond II Kit Primer 5 ml, Bonding Agent 5 ml, MicroBrush pink and yellow, 25 pcs. each, 1 dispo dish, 1 plastic cover
1307	5 ml	FL-Bond II Primer
1308	5 ml	FL-Bond II Bonding Agent
1309	6 ml	FL-Bond II Etchant

Application

STEP 1: PRIMING

The FL-Bond II Primer contains a new effective adhesive promoting monomer and a new photo initiator. The self-etching Primer prepares the enamel and dentine surfaces while eliminating the need for separate etching with phosphoric acid.

STEP 2: BONDING

The FL-Bond II Bonding Agent incorporates fluoride containing S-PRG fillers (Surface Pre-Reacted Glass-ionomer) which offer a permanently available protection against secondary caries by an optimised remineralisation of the adjacent hard tooth structure. Because of its high filler loading FL-Bond II provides exceptional resistance against abrasion and effectively avoids a marginal washout along with durable sealing.

Low viscosity (other bonding agent)

Extremely thin bonding layer
Collection of liquid at cavity floor

Moderate viscosity (FL-Bond II)

Equal bonding layer thickness

info

The adhesive etching agent FL-Bond II Etchant is especially suited for etching before the use of self-etching bonding systems on enamel; it only contains approximately 7% phosphoric acid.

BeautiBond

Light-curing, self-etching one-component adhesive

BeautiBond is an innovative “all in one” adhesive of the 7th generation, for the bonding of filling composites to natural enamel and dentine, and offers a high initial and constant bond strength. The absence of laborious and technically sensitive procedures guarantees bonding to be both simple and fast, meaning that the build-up of the fillings can be started in less than 30 seconds.

Indications

Enamel and dentine conditioning with one component only

PN	Quantity	Product
1781	1 box	BeautiBond 6 ml (bottle), Microtip fine (1 handle, 50 applicator tips), dish, 25 pcs.
1782	1 box	BeautiBond 0.1 ml (unit dose), 50 pcs., MicroBrush Fine (pink), 50 pcs.

BENEFITS

Excellent bonding to enamel and to dentine due to two specially developed monomers

The absence of hydrolysis-sensitive HEMA prevents ageing caused by hydrolysis and guarantees permanently strong and safe bonding.

The unique chemistry minimises postoperative sensitivities or white discolouration of the gingiva.

The very thin bonding layer of around 5 µm creates ideal conditions for an invisible margin of the restoration.

Aesthetic solution for flat or shallow cavities in the context of minimally invasive therapy

Conservative tooth preparation before application of BeautiBond

Application of BeautiBond, drying and light curing. The thin bonding layer leaves sufficient space for an aesthetic restoration of the small cavity.

Excellent result with invisible margin in combination with Beautifil II

SHOFU MZ Primer Plus

Primer for bonding resin to metal, zirconia or alumina

SHOFU MZ Primer Plus reliably and durably bonds resins to all dental alloys, zirconia and alumina – even without the use of retention beads!

This primer can be applied intraorally and will always ensure excellent bond strengths when used in combination with the light-cured opaque pastes of the SHOFU Universal Opaque System.

BENEFITS

Strong bond without the need for retention beads

For all dental alloys and zirconia-based frameworks

For intraoral and extraoral use

Easy and quick handling without any additional equipment

SHOFU MZ Primer Plus, the successor to the clinically proven M.L. Primer, may be used for a wide range of substrates, including all precious and nonprecious alloys, zirconia and alumina, and is characterised by easy and efficient handling. It is the universally reliable solution for bonding resins to all frameworks made by CAD/CAM technology.

Indications

- Application of SHOFU Universal Opaque to metal frameworks
- Intraoral and extraoral repair of fractured restorations
- Bonding of denture base resin to metal bases or attachments
- Cementation of gold/zirconia inlays, crowns and bridges with resin cement
- Bonding of resin to orthodontic appliances

PN	Quantity	Product
Y0006	5 ml	SHOFU MZ Primer Plus

SHOFU MZ Primer Plus

SHOFU Universal Pre-Opaque

SHOFU Universal Opaque

HC Primer

Bonding system for all hybrid-ceramic CAD/CAM restorations

HC Primer provides the perfect surface pretreatment for reliable adhesive bonding of SHOFU Block HC and Disk HC, plus all other hybrid ceramics. Thanks to its innovative composition, this primer penetrates the matrix of hybrid ceramics; on the other side, it forms a durable bond to adhesive resin cements.

BENEFITS

Pretreatment of the bonding surfaces of CAD/CAM restorations

Strong, durable bond to hybrid ceramics and resins

Optimal wettability

Universal applicability

Easy application with a brush

Quick handling (apply, air-dry, light-cure)

PN	Quantity	Product
Y0005	5 ml	HC Primer

HC Primer infiltrates the polymer matrix, ensuring strong micro-mechanical retention between primer and restoration – without the risk of inclusions or bubbles.

Thanks to optimal wettability, the primer creates a durable base for adhesive cementation with ResiCem.

- CAD/CAM restoration
- HC Primer
- Cement layer

Indications

Pretreatment of hybrid-ceramic CAD/CAM restorations

info

For adhesive cementation of CAD/CAM restorations, we recommend the use of dual-cure resin cements, such as ResiCem universal luting composite system (see p. 69).

M.L. Primer

For secure bonding on all dental alloys

M.L. Primer offers a secure and durable adhesive system for bonding veneering composite to all common dental alloys. Based on adhesive monomers M.L. Primer reliably bonds without requiring extensive processing and is resistant to moisture and thermal strains. It is easy to handle and suitable for nearly all indications, as it can be used intra and extra orally.

Indications

- Production and repair of composite restorations
- Repair of PFM restorations
- Production and repair of chrome cobalt dentures or metal attachments
- Bonding and repairing of metal restorations (crowns and bridges), metal splints, metal posts and cores with dental adhesive resin or bonding- / filling material

PN	Quantity	Product
1740	5 ml	M.L. Primer

AZ-Primer

For adhesive bonding of porcelains

The AZ-Primer has been exclusively developed for the modern materials zirconia and alumina and guarantees outstanding bonding values between the restoration and the hard tooth structure.

The 6-MHPA monomer, specially adapted for high-performance porcelains, anchors itself permanently to the restoration and thus is superior to other bonding systems, especially “all-in-one” products.

PN	Quantity	Product
3232	5 ml	AZ-Primer

Porcelain Primer

Primer for the bonding of porcelain or composite

The porcelain primer with silane components is available for adhesive bonding of sintered and pressed ceramics as well as indirect composites with luting composites such as ResiCem.

The achieved shear strength of about 30 MPa of the luting composite to porcelain is secure and above market average.

PN	Quantity	Product
3234	5 ml	Porcelain Primer

CRB - Ceraresin Bond

For all repairs of chipped porcelain or composite restorations

With the Ceraresin Bond system you now have the option to securely and durably bond various materials intra and extra orally. For example, CRB can be used for extending porcelain restorations quickly and efficiently with light-curing materials. Moreover, CRB combines cold-curing resins with light-curing veneering material, as well as different light-curing veneering composites with each other. Also there are no limits to individualising denture teeth with light-curing veneering material.

Used as adhesive when

- ceramic restorations are to be repaired with filling composite, C&B composite, or denture base material
- porcelain or resin teeth are to be modified and repaired with filling composite, C&B composite, or denture base material
- dental restorations are made from or repaired with filling composite, denture base material or C&B composite
- dental restorations made of dental ceramic, C&B composite, filling composite or denture base material are to be repaired

PN	Quantity	Product
1741	1 pc.	CRB Kit: CRB I 16 ml, CRB II 5 ml, MicroBrush yellow and pink, 25 pcs. each, 5 dispo dishes

GlasIonomer Cement Type II

Clinically proven filling material

GlasIonomer Cement Type II is a long-proven filling material, available in 4 different mixable shades.

PN	Quantity	Product
1130	1 pc.	GlasIonomer Cement Type II, 4-2 Set 4 shades, powder 4x 15 g, liquid 2x 8 ml, varnish 10.6 ml, cocoa butter 10 g, matrix strips, mixing pad, shade guide, 3 polishers, spatula, spoon
1131, 1133	1 pc.	GlasIonomer Cement Type II, 1-1 Set powder 15 g, liquid 8 ml, varnish 10.6 ml, cocoa butter 1 g, matrix strips, mixing pad, spatula, spoon; Universal: 1131, Grey: 1133
1140	8 ml	liquid
1141	15 g	powder in the shade universal

Indications

- Class III and IV cavities
- Filling of deciduous teeth
- Cavity lining
- Abutment construction

HI-FI GlasIonomer

Aesthetic anterior glass ionomer restorative in mixable shades

HI-FI offers the aesthetic results of a composite and at the same time the outstanding biocompatible properties of a glass ionomer cement. The mixable VITA® Classical shades enable an optimal colour adjustment.

PN	Quantity	Product
3131	1 box	HI-FI Selected Palette powder 4x 15 g (A2, A3.5, B2, C3), liquid 10 ml, HI-Glaze 5 ml, HI-Tooth Cleanser 10 ml, spoon
3140	10 ml	HI-FI liquid
3141-3146	15 g	HI-FI powder A1: 3141, A2: 3142, A3.5: 3143, B2: 3144, C3: 3146
3149-3151	1 pc.	HI-FI Dual Pack powder 15 g, liquid 10 ml A2: 3149, A3.5: 3150, B2: 3151

Indications

- Class V cavities
- Class III cavities
- Posterior cavities in deciduous teeth
- Pits and fissures
- Selected cuspal repairs

Glaslonomer FX-II

All-purpose glass ionomer, specially created for the minimally invasive dentistry

Glaslonomer FX-II is an universal and modellable glass ionomer for general dentistry. It was specially created for minimally invasive treatments.

Indications

- Minimally invasive treatments
- Final restorative for deciduous teeth
- Geriatric restorative for class I, II, III, V cavities and cervical erosions
- Final restorative for class I, II of adult dentition in non-stress bearing areas
- Temporary restorative for heavy stressed cavities
- Core build-up and liner
- Pit and fissure sealing

PN	Quantity	Product
3192-3195	1 pc.	Glaslonomer FX-II Cement Set powder 15 g, liquid 8 ml, cocoa butter 1 g, matrix strips, mixing pad, spatula, A2: 3192, A3: 3193, A3.5: 3194, B2: 3195
3203	1 pc.	Glaslonomer FX-II Cement Mini-Set shade A3, powder 6 g, liquid 2.8 ml, spoon

HI DENSE

Silver reinforced glass ionomer restorative, packable like amalgam

HI DENSE contains spherical particles of a silver-tin alloy in a specially developed glass ionomer, giving this glass ionomer outstanding physical properties.

PN	Quantity	Product
3110	1 pc.	HI DENSE Dual Pack powder 10 g, liquid 5 ml
3111	10 g	HI DENSE powder
3112	5 ml	HI DENSE liquid
3113	1 pc.	HI DENSE Jumbo Dual Pack powder 30 g, liquid 10 ml

Indications

- Class I and II cavities in deciduous teeth
- Repair of teeth or amalgam restorations
- Lining under amalgam and posterior composite restorations
- When radiopacity is more important than aesthetics
- Core build-up
- Long-term temporary replacement for cusps
- Repair of crown margins

GlasIonomer Base Cement

For build-up of dentine or as liner under filling materials

GlasIonomer Base Cement is not only a radiopaque base cement, but a dentine substitute as well. It chemically bonds with dentine and enamel and is particularly soft tissue friendly. The powder is available in a yellowish dentine colour and in white as a brightener to achieve brighter tooth colours.

Indications

Base material for amalgam and composite fillings as well as porcelain restorations

PN	Quantity	Product
1110	1 pc.	GlasIonomer Base Cement Set yellow, powder 15 g, liquid 5 ml
1113	15 g	GlasIonomer Base Cement powder, white
1114	5 ml	GlasIonomer Base Cement liquid

Accessories for all filling cements

PN	Quantity	Product
1138	10.6 ml	varnish
1139	10 g	cocoa butter
1148	20 pcs.	matrix strips
3135	10 ml	HI-Tooth Cleanser
3136	5 ml	HI-Glaze

CoreShade Glaslonomer Base Cement

Glass ionomer without alloy additives

CoreShade is a grey glass ionomer core build-up material. It chemically bonds to dentine, enamel, pins and posts.

Indications

For dependable metal-free core build-up and as easily detectable dentine replacement under stress-bearing restorations

PN	Quantity	Product
1115	1 pc.	CoreShade Cement Set powder 25 g, liquid 10 ml
1116	25 g	CoreShade powder
1117	10 ml	CoreShade liquid

Glaslonomer Cement CX-Plus

Radiopaque luting cement

CX-Plus is recommended for luting posts, crowns, bridges, inlays and brackets; it is ideally suited for the bonding of long span bridges. It offers a prolonged working time and shows a lower sensitivity to moisture during the beginning setting.

PN	Quantity	Product
1166	1 pc.	CX-Plus Set powder 35 g, liquid 17 ml
1167	35 g	CX-Plus powder
1168	17 ml	CX-Plus liquid
1169	1 pc.	CX-Plus Triple Set 3x powder 35 g, 3x liquid 17 ml
1187	1 pc.	CX-Plus Mini-Set powder 15 g, liquid 8 ml

HY-Bond Polycarboxylate Cement

Luting cement

HY-Bond Polycarboxylate Cement contains a unique tannin-fluoride additive to help sealing the dentinal tubules.

Indications

- Direct luting of crowns, bridges and inlays
- Lining of cavities and lesions

PN	Quantity	Product
1160	1 pc.	HY-Bond Polycarboxylate Cement Set powder 60 g, liquid 33 ml, spoon
1161	60 g	HY-Bond Polycarboxylate powder
1162	33 ml	HY-Bond Polycarboxylate liquid

BENEFITS

- Chemical bond of tooth structure and metal
- High adhesive strength
- Radiopaque
- Contains tannin-fluoride

HY-Bond Zinc Phosphate Cement

Luting cement

HY-Bond Zinc Phosphate Cement combines the strength and reliability of a zinc phosphate cement with a unique tannin-fluoride additive.

Indications

- Cementation of metal crowns, bridges and inlays
- Lining of cavities and lesions

PN	Quantity	Product
1170	1 pc.	HY-Bond Zinc Phosphate Cement Set powder 60 g, liquid 25 ml, spoon
1171	60 g	HY-Bond Zinc Phosphate powder
1172	25 ml	HY-Bond Zinc Phosphate liquid

BENEFITS

- Good film thickness
- High compressive strength
- Seals tubules and minimises post operative sensitivity

HY-Bond ZOE Temporary Cement

Temporary luting cement

HY-Bond Zinc Oxide Eugenol Temporary Cement sets quickly also in a moist oral environment and guarantees a secure bond, despite being easily removed from the tooth. It contains a patented tannin-fluoride additive, which seals the dentinal tubules and minimises post operative sensibilities.

Indications

- Cementing temporary crowns and bridges
- Lining material for onlays, inlays, amalgam or silicate restorations

BENEFITS

- Easy mixing and handling
- Radiopaque
- Easily removed
- Can be placed on freshly cut dentine without causing irritation

PN	Quantity	Product
1180	1 pc.	HY-Bond ZOE Cement Set powder 20 g, liquid 12 ml, spoon

HY-Bond Temporary Cement – Soft

Temporary polycarboxylate cement

With this temporary cement type the polycarboxylate cement base was combined with a tannin fluoride additive. It is ideally suited for provisional bonding.

Indications

- Temporary cementing of provisionals
- Indirect pulp capping, temporary sealing after cavity preparation
- Temporary cementing of deciduous cavities

PN	Quantity	Product
1173	1 pc.	HY-Bond Temporary Cement - Soft Set powder 125 g, liquid 60 ml, spoon

Fissure Sealing	84 - 85
Temporary Coating	86
Polishing Pastes ■ Polishers	86

PROPHYLAXIS

BeutiSealant

Self etching fluoride releasing pit & fissure sealant

This fissure sealant is simple and gentle on the tooth substance and consists of the BeutiSealant primer and the BeutiSealant paste. The self etching primer shortens the conventional treatment time by eliminating the treatment steps of etching and rinsing.

The treatment is gentle, as the demineralised and dehydrated effect of the phosphoric acid etching on healthy tooth substance is avoided.

- BeutiSealant achieves a sheer bond strength of 19.5 MPa, which is comparable or even better than fissure sealing with phosphoric etching.

- The BeutiSealant paste continuously releases fluoride.

Secure Seal

The paste has an optimal flow and bubble free consistency and is easy to apply, hence completely filling and permanently sealing gaps and voids. A specially developed ultra fine 27 gauge cannula (\varnothing 0.4 mm) for precise application is part of the set.

BENEFITS

- Ideal handling and viscosity

- Eliminate trapped air due to bubble free consistency

- Radiopacity equal to dentine: 0.92 mm Al

- High shear bond strength without etch and rinse technique

- Application in four easy steps within 30 seconds

Indications

Preventive pit and fissure sealant of deciduous and permanent teeth

info

- The fluoride free Pressage paste is recommended for the professional cleaning before the fissure sealing (see page 35).

PN	Quantity	Product
1798	1 pc.	BeutiSealant Set BeutiSealant paste 1.2 g, BeutiSealant primer 3 ml, 15 needle tips, 50 pcs. Microbrush Fine (pink), 25 pcs. V-dish
1799	1.2 g	BeutiSealant paste
1800	3 ml	BeutiSealant primer
1794	50 pcs.	BeutiSealant needle tips 27 G

Four easy steps

1 Apply primer to clean tooth and leave for 5 seconds

2 Gently air dry for 5 seconds

3 Apply paste

4 Light-cure with a halogen (20 seconds) or LED (10 seconds) curing light

BEAUTIFIL Flow F10

Flowable composite material for tight and bubble-free restorations

Beautifil Flow F10 is especially suitable for fissure sealing due to its user friendly viscosity and the caries protective effect of the fluoride release.

Detailed information on page 64

Source: University of Giessen, Germany
 "Sind unterschiedliche Flowables zur Versiegelung minimal-invasiv
 erweiterter Fissuren geeignet?"
 ("Are different flowables suitable for minimally-invasive extended
 fissure sealing?")

This cross-section of a tooth subjected to dye penetration testing after extended fissure sealing shows a tight and bubble-free restoration.

Resin Glaze

Temporary surface gloss coating

Resin Glaze is a light-cured, surface gloss coating material for temporary restorations. The bonding of the material (Liquid) is increased when used in conjunction with the related Primer.

Indications

For temporary glazing of artificial resin teeth, acrylic denture base materials, CAD/CAM PMMA materials, CAD/CAM hybrid ceramic materials, indirect composite resins, provisional materials

PN	Quantity	Product
Y0003	6 ml	Resin Glaze, Primer
Y0004	6 ml	Resin Glaze, Liquid

Merssage ■ Pressage

Prophylaxis pastes for all indications

The fluoride containing Merssage pastes remove plaque and provide a smooth and polished tooth surface. The fluoride free Pressage paste is used before bleaching or fissure sealing (see page 35).

DirectDia Paste

Diamond impregnated polishing paste for intra and extraoral high gloss polish

The diamond impregnated paste is used for polishing and cleaning natural teeth and for the removal of discolourations of all restorative materials (see page 32).

OneGloss ■ OneGloss PS

For composite and enamel

The instruments are ideal for the removal of surface discolourations without damaging the enamel, for enamel polishing after scaling and for taking off composite or cement residue after the removal of brackets (see page 25/26).

SHOFU Block HC
SHOFU Disk HC

CAD/CAM-MATERIALS

SHOFU Block HC ■ SHOFU Disk HC

Ceramic-based CAD/CAM material for durable, metal-free restorations

SHOFU Block HC can be used for almost all single-tooth indications for CAD/CAM technology and machined wet or dry in all standard milling units. This high-performance restorative material features exceptional long-term stability and flexural strength, plus lifelike light diffusion. It comes with three different holding pins (Universal, CEREC and Ceramill), in various shades (high- and low-translucency) and as one and two-layer milling blocks. The two additional enamel shades are particularly suitable for aesthetic inlays, onlays and veneers.

For milling with the aid of open CAM systems, SHOFU Disk HC circular blocks, 98.5 mm in diameter, are also available.

Our versatile and stress-absorbing hybrid material can be easily and accurately milled and quickly polished to a high gloss.

info

For adhesive cementation, we recommend the use of HC Primer, an innovative bonding system infiltrating the polymer matrix and ensuring very high bond strengths in combination with Resi Cem (see page 69).

For easy and efficient pre-polishing and high-gloss polishing, our CeraMaster Coarse and CeraMaster silicone polishers with integrated diamond particles (see page 20/21), as well as Dura-Polish and Dura-Polish DIA polishing pastes will be ideal.

BENEFITS

- Stress-absorbing hybrid-ceramic material
- Wide range of shades and translucencies
- Two-layer blocks for aesthetic anterior restorations
- High flexural strength (more than 190 MPa)
- Lifelike light diffusion and fluorescence
- Excellent handling and milling properties
- Easy and efficient polishability

Indications

Fabrication of inlays, onlays, veneers and full crowns for anterior and posterior teeth, as well as implant-supported restorations, using dental CAD/CAM systems

PORCELAIN SYSTEMS

Good Reasons for Porcelain, Excellent Reasons for Vintage

Whether metal-reinforced or metal-free, whether easy and efficient or challenging and customised: The Vintage system provides dental technicians with a wide range of porcelains to suit every patient, every situation and every framework material.

Each Vintage line features an assortment of perfectly matched high-quality porcelains or stains, easy and safe handling properties, accurate adaptation of the CTE to the respective framework material, and impressive, natural aesthetics and light dynamics.

In brief: Dental technicians can rely on Vintage in any situation. After all, this modular system is based on more than 30 years of experience and expertise in dental porcelains. Besides, the product range has been continuously optimised and expanded in recent years. Today the Vintage system includes seven state-of-the-art porcelain lines and two stain lines.

Benefits of VINTAGE porcelains

- One system for all framework materials, indications and requirements
- Consistent shade and layering concept
- Reliable handling thanks to years of experience
- Lifelike opalescence, translucence and fluorescence
- Large variety of incisal and effect porcelains
- Highly accurate adaptation of the CTE to the framework material
- Customised shade matching with porcelain stains

Whether nonprecious and universal PFM alloys or zirconia frameworks, whether high or low-fusing, whether pressed or based on feldspar or lithium disilicate: Vintage porcelains offer dental technicians unique versatility.

In transmitted light, a Vintage MP PFM crown looks more like a metal-free restoration, because the contours of the opaqued metal frame are barely perceptible.

VINTAGE PRO

Optimised leucite-reinforced feldspathic porcelain for the classical CTE range

Vintage PRO represents a new generation of PFM systems. This innovative leucite-reinforced feldspathic porcelain, based on the high-fusing Vintage systems, is characterised by professional efficiency and aesthetics. The excellent handling of the well-established product lines has been systematically optimised, and its porcelain basis has been combined with new materials – for even greater ease of use, higher safety and firing stability, and naturally opalescent shades.

BENEFITS

- Professional aesthetics with precise opalescence and fluorescence
- Easy handling thanks to high stackability during sculpting
- Perfect adaptation to all conventional PFM alloys
- True-to-nature shade system reproducing all VITA* Classical shades
- Customised shade matching with effect porcelains and stains
- Excellent colour, dimensional and firing stability – even after multiple firing

With its firing temperature of approx. 900 °C, Vintage PRO is indicated primarily for veneering nonprecious alloy frameworks, but it can also be used to easily and aesthetically veneer high-gold, reduced-gold or palladium-based PFM alloys. Besides, the system is ideal for use on metal frameworks made by CAD/CAM or sintering.

The uncomplicated porcelains of the Vintage PRO system allow both beginners and professionals to achieve maximum aesthetics in a minimum of time.

Indications

Compatible with all commonly used PFM alloys with a recommended CTE of $13.5 - 14.8 \times 10^{-6} \text{K}^{-1}$

Dentine build-up

Translucent layer between Body and Opal Incisal

Completion of the tooth shape with Opal Incisal

VINTAGE MP ■ VINTAGE MP Uni-Layer

Porcelain system for all high-fusing alloys

Vintage MP is an ultra-fine micro ceramic for veneering all conventional, high-fusing PFM alloys, whether high, semi or non precious, with a recommended CTE range of 13.6 to 15.2. Thanks to a special production process, the porcelain is adapted to the diffused light reflection of natural enamel and dentine.

In addition to the tooth-like diffused light reflection provided by the porcelain structure it also offers a leucite-reinforced crystalline structure with particular temperature-resistant colour pigments in the crystal and glass phases compared to conventional ceramics, even after several firings, hence preserving colour brilliance and depth effect of the porcelain.

The naturalness of the VINTAGE MP porcelain powders is demonstrated under all natural light conditions and under ultra-violet light.

BENEFITS

- Above average bonding strength with all PFM alloys using the orange-coloured Base Opaque
- Exceptional colour stability
- Extremely fine paste opaques provide superb cover characteristics
- Low shrinkage during firing and homogeneous, dense surfaces
- Intensive fluorescent margin and cervical trans powders
- Versatile applicable opalescent incisal and effect powders

VINTAGE MP Uni-Layer

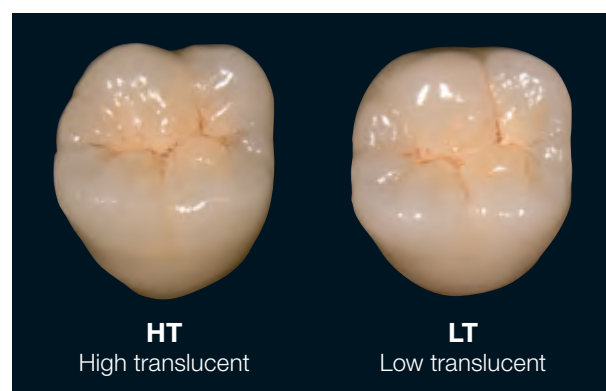

With this innovative one layer porcelain full anatomical anterior and posterior restorations can be produced efficiently.

Perfectly balancing light diffusion and chroma, this porcelain combines the optical characteristics of dentine and incisal powders in one material – for a harmonious shade progression and the illusion of depth.

- Quick and easy single-layer technique
- Simple correction options
- All 20 shades of the VITA* Classical Shade System can be reproduced with only 2 powders and the Vintage MP paste opaques

Indications

Veneering of all conventional, high-fusing PFM alloys, whether high, semi or non precious, with a recommended CTE range of 13.6 to 15.2

The restoration with Vintage MP Uni-Layer can be produced in higher or lower translucency.

Standard Set HC

Standard Set HC

Contains all components for restorations in the shades A1-A4, B2, B3 and C2

- Base Opaque, 5 g • 8x Shade Opaque, 5 g each • 8x Body, 15 g each
- 3x Cervical, 15 g each • 8x Opaque Dentin, 15 g each
- 4x Opal Enamel, 15 g each • Opal Effect, 15 g
- 2x correction porcelain (Add-On B/Add-On T), 15 g each
- Vintage MP Opaque Liquid, 3 ml • Vintage Mixing Liquid HC, 50 ml
- instructions for use

Starter Set

Contains all components for restorations in the shades A2 or A3

- Base Opaque, 5 g • Shade Opaque, 5 g • Body, 15 g • Cervical, 15 g
- Opaque Dentin, 15 g • Opal Enamel, 15 g • Opal Effect, 15 g
- Vintage MP Opaque Liquid, 3 ml • Vintage Mixing Liquid, 20 ml
- instructions for use

Starter Set

Enamel Effect Set

Incisal and translucent powders for an individual, natural light transmission in the incisal area

- 9x Opal Effect, 15 g each • 5x Enamel Effect, 15 g each
- 5x Cervical Translucent, 15 g each • instructions for use

Color Effect Set

For individual effects in the dentine and cervical area

- 10x Color Effect, 15 g each • 4x Gum, 15 g each
- instructions for use

Margin Porcelain Set

Highly fluorescent margin powders in the shades W0 to D4 for precisely fitting margins

- 13x Margin, 15 g each • 7x Margin Effect, 15 g each
- 2x correction porcelain (Add-On B/CPM Fine), 15 g each
- Vintage CPM Modelling Liquid, 3 ml • Vintage Margin Hardening Liquid, 50 ml
- Vintage Margin Porcelain Isolation Liquid, 7 ml • instructions for use

Whitening Set

Additional shades W0, W1, W2 and W3 for brighter restorations (bleaching shades)

- Base Opaque, 5 g • 4x Shade Opaque, 5 g each • 4xBody, 15 g each
- 2x Opaque Dentin, 15 g each • 3x Opal Enamel, 15 g each
- Opal Effect, 15 g • Vintage MP Opaque Liquid, 3 ml
- Whitening Shade Guide • instructions for use

VINTAGE Halo

Feldspar porcelain with halo effect

The high-fusing porcelain system with natural light scattering and reflection (halo effect) was developed in cooperation with Makoto Yamamoto. With just a base build-up of opaque dentine, dentine and the opalescent incisal powders, natural-looking restorations are achieved without the use of special effect powders. With a firing temperature of 910 °C for the dentine firing Vintage Halo is ideal for the combination with all standard and biocompatible alloys.

Using the opalescent incisal powders allows a logical layering technique with dentine and enamel porcelain to give the appearance of a natural tooth.

Indications

Compatibility with all standard alloys with CTE values of $13.5 - 14.6 \times 10^{-6} \text{K}^{-1}$ (25 °C - 500 °C)

BENEFITS

- Natural fluorescence and opalescence also after several firings
- Compatible with alloys containing up to 30 % silver
- Economical layering system by modified 2-layer-technique (Body / Opal Incisal)
- Individual colour indicators for all components
- High build-up stability
- Low firing shrinkage

Natural teeth have a binary structure consisting of dentine and enamel. The dentine gives the tooth its shade and saturation. Its natural appearance is then the result of the interaction between light and colours.

Base Set

Base Set

Introduction to the 19 basic shades

- 19x Opaque Dentin, 15 g / 50 g each • 19x Body, 15 g / 50 g each
- 6x Opal Enamel, 15 g / 50 g each • 6x Enamel, 15 g / 50 g each
- 2x correction porcelain (Add-On B/Add-On T), 15 g each
- 1 each Shade Guide No. 1, No. 2, No. 3 • instructions for use

Opaque Powder Set

Powder opaque in 19 basic shades

- 19x Powder Opaque, 15 g each • Vintage Halo Opaque Liquid, 50 ml
- instructions for use

Whitening Set

Opal Porcelain Set

Opalescent incisal and effect shades for the optimal light refraction in the incisal area

- 10 shades, 15 g / 50 g each • Shade Guide No. 2
- instructions for use

Effect Color Set

Natural effects for opaque dentine, dentine and the incisal area

- 10 shades, 15 g each • Shade Guide No. 6
- instructions for use

Margin Porcelain Powder Set

For fitting aesthetic margins

- 19 shades, 15 g each • correction CPM, 15 g
- correction porcelain (CPM Fine), 15 g • Isolation Liquid, 10 ml,
- Vintage CPM Modelling Liquid, 3 ml • Shade Guide No. 7
- instructions for use

Whitening Set

Additional shades W1, W2 and W3 for brighter restorations (bleaching shades)

- 3x Opaque, 15 g each • 3x Body, 15 g each
- Opal Enamel (Opal 56), 15 g • Shade Guide
- instructions for use

Classical PFM system

The leucit reinforced feldspar porcelain was developed for the efficient and cost-effective production of high-quality aesthetic restorations. Developed according to the VITA® Classical Shade System it is compatible with precious and non-precious alloys. The Vintage dentine and incisal powders have a natural fluorescence and are extremely colour stable even after several firings.

BENEFITS

Harmoniously coordinated individual components in the range of the VITA® Classical Shade System

Easy handling

High colour accuracy even with thin layers

Indications

The Vintage porcelain system is compatible with all common ceramic alloys with a CTE range of $13.6-15.0 \times 10^{-6} \text{K}^{-1}$ (25 °C - 500 °C).

VINTAGE LD Press

Ingots for the production of all-ceramic restorations

Vintage LD Press is a lithium disilicate glass ceramic in form of ingots for pressing inlays, onlays, veneers, crowns and anterior bridges. The press ingots have a high mechanical strength and are available in four different translucencies.

■ T (Trans)

high translucency in three shades
for producing smaller restorations like inlays,
onlays and veneers in the staining technique

■ MT (Middle Trans)

middle translucency in all VITA® Classical shades
for the cut-back, layering or staining technique

■ LO (Low Opacity)

low opacity in five colours
for individual abutments or slightly discoloured
preparations

■ MO (Middle Opacity)

middle opacity in three shades
for production of frameworks for strongly
discoloured preparations

BENEFITS

Long term stability due to high mechanical strength

Simple and efficient handling

4 different translucencies for natural aesthetics, independent of the die colour

Can be combined with Vintage LD layering porcelain and Vintage Art LF stains

Indications

For pressing crowns, inlays, onlays, veneers and anterior bridges (up to three units without molars)

VINTAGE LD Press - Sets and Single Components

Basic Set

Basic Set

For pressing metal free lithium disilicate restorations in the shades A2, A3 and B2 as well as ingots of different opacities for the layering and staining technique

Vintage LD Press

- 40 ingots, 3 g each: 5 pcs. each in the shades MT-A1, MT-A2, MT-A3, MT-B2, LO-1, LO-2, T-1, T-2

Ceravety Press & Cast

- 5x powder, 100 g each • liquid, 100 ml

Trial Kit

5 ingots of different shades and translucencies for the introduction of the Vintage LD press technique

- 5 ingots, 3 g each: 2x MT-A2, 2x MT-A3, 1x T-1

VINTAGE ZR ■ VINTAGE ZR Uni-Layer

Porcelain system for all available zircon oxide frameworks

Vintage ZR is a fine structured, leucite reinforced micro porcelain for metal free restorations. The natural feldspar based structure guarantees a secure bond to all zircon oxide frameworks and a very high stability and strength of the aesthetic restorations.

Due to the light optical properties of Vintage ZR, the porcelain restorations appear natural and expressive.

BENEFITS

- High-fusing Opaque Liner (960 °C) secure the bond to the zircon oxide framework and are the shade basis of the restoration
- Impressive aesthetics by natural translucency and opalescence
- Excellent shade match to natural teeth and to the VITA* Classical Shade System
- Extensive range of translucent incisal and effect powders
- Low investment cost due to modular system components
- Constant CTE of about $9.3 \times 10^{-6} \text{K}^{-1}$, even after several firings

VINTAGE ZR Uni-Layer

Fully anatomical anterior and posterior restorations can be built up with only one layer with this innovative porcelain.

Perfectly balancing light diffusion and chroma, this porcelain combines the optical characteristics of dentine and incisal powders in one material – for a harmonious shade progression and the illusion of depth.

- Quick and easy single-layer technique
- Simple correction options
- Easy shade matching with Vintage Art porcelain stains
- Can be combined with the opalescent and translucent materials of the Vintage ZR system depending on the demand and situation

Indications

Facing of all crown and bridge constructions made of zirconia

The restoration with Vintage ZR Uni-Layer can be produced in higher or lower translucency

AB Set

AB Set

Components for aesthetic all-ceramic restorations in the shades A1-A4, RootA and B1-B4

- 10x Opaque Liner, 5 g each • 10x Body, 15 g each
- 2x Cervical, 15 g each • 5x Opaque Dentin, 15 g each
- 4x Opal Enamel, 15 g each • Opal Effect, 15 g
- 2x correction porcelain (Add-On B/Add-On T), 15 g each
- Vintage AL/ZR Opaque Liner Liquid, 3 ml • Vintage Modelling Liquid, 50 ml
- colour table • instructions for use

CD Set

CD Set

Practical addition in the shades C1-C4 and D2-D4 to complete the AB Set

- 7x Opaque Liner, 5 g each • 7x Body, 15 g each • 2x Cervical, 15 g each
- 3x Opaque Dentin, 15 g each • Vintage AL/ZR Opaque Liner Liquid, 3 ml
- colour table • instructions for use

Enamel Effect Set

Opalescent and translucent incisal powders for individual effects in the incisal area

- 8x Opal Effect, 15 g each • 5x Enamel Effect, 15 g each
- 5x Cervical Translucent, 15 g each • colour table
- instructions for use

Color Effect Set

For individual effects in dentine and cervical areas

- 3x Opaque Liner Effect, 5 g each • 8x Color Effect, 15 g each
- 2x Gum, 15 g each • colour table • instructions for use

Margin Porcelain Set

For fitting aesthetic margins

- 9x Margin, 15 g each • 2x Effect, 15 g each
- 2x correction porcelain (Add-On B/CPM Fine), 15 g each
- Vintage CPM Modelling Liquid, 3 ml
- Vintage Margin Porcelain Isolation Liquid, 7 ml • colour table
- instructions for use

Whitening Set

Additional shades for brighter restorations

- 3x Opaque Liner, 5 g each • 3x Body, 15 g each
- 2x Opaque Dentin, 15 g each • 2x Opal Enamel, 15 g each
- Opal Effect, 15 g • Vintage AL/ZR Opaque Liner Liquid, 3 ml
- colour table • instructions for use

VINTAGE Art

Fluorescent porcelain stains for internal and external modifications

The ready-to-use Vintage Art paste stains impress with their micro-fine particle structure and ideal consistency. They exhibit excellent application properties and achieve outstanding coverage.

The stains are recommended for the internal and external shade modification of all high-fusing metal porcelains. They can also be applied on all high-fusing metal free ceramic restorations with zirconia and alumina frameworks, CAD/CAM porcelain blocks, press porcelains and ceramic teeth.

BENEFITS

- Compatible with all high-fusing porcelains
- Easy to use paste stains
- Wide variety of intensive and effect shades
- Fluorescent glazing paste

Indications

- Pressed all-ceramic**
Veneers, inlays/onlays, crowns/bridges
- CAD/CAM all-ceramic**
Feldspar blanks, alumina and zirconia blanks
- Metal-free and metal-bonded porcelains**
CTE range of $6.0-16.0 \times 10^{-6}K^{-1}$, firing temperature approx. 880 °C

Shades

- Base Color Stains**
9 primary and secondary shades as well as achromatic colours for the adjustment of the hue
- Color Stains**
12 effect shades for the adjustment of all individual shades
- Shade Stains / Foundation Shade Stains**
10 shades for surface staining of the tooth shades according to the shade group of the shade guide

VINTAGE Art - Sets and Single Components

Basic Color Set

Basic Color Set

All classical primary and secondary shades as well as shade stains for the natural colour reproduction of all restorations

- 16 shades, 3 g each: Pink, Yellow, Blue, Orange, Violet, Green, Black, White, Dark Red Brown, Orange Brown, Khaki, A-Shade, B-Shade, C-Shade, D-Shade, R-Shade
- Glazing Paste, 3 g • Vintage Art Stain Liquid, 50 ml • colour table
- instructions for use

Effect Color Set

Individual shades and Foundation Shade Stains for the reproduction of any tooth characteristics

- 15 shades, 3 g each: Gray, Blue Gray, Corn Yellow, Brown, Black Brown, Mamelon Pink, Mamelon Ivory, Rose Pink, Wine Red, Pink Orange, Foundation A-Shade, Foundation B-Shade, Foundation C-Shade, Foundation D-Shade, Foundation R-Shade
- Glazing Paste, 3 g • Vintage Art Stain Liquid, 50 ml • 1 colour table

VINTAGE Art LF

Low-fusing fluorescent porcelain stains for internal and external shade modifications

The ready-to-use silicate glass based Vintage Art LF paste stains offer excellent handling and application properties as well as outstanding coverage due to their ultra fine particle structure. They are available in a number of nuances and offer various porcelains a natural shade appearance and individual characteristics by internal or external staining. In order to cater to different demands of aesthetic restorations they are available in a total of 23 shades.

Indications

Different porcelains, like lithium disilicate, press ceramic, restorations based on zirconia or aluminum oxide, CAD/CAM blocks and metal porcelains

Firing temperature approx. 770 °C

Stains

Primary, Secondary and Shade Stains

BENEFITS

Compatible with all standard porcelains

Easy handling

Effortless application in thin layers

Adjusted to fluorescence of natural teeth

VINTAGE Art LF - Set and Single Components

Ceravety Press & Cast

Universal speed investment for pressable ceramics and cast alloys

Ceravety Press & Cast creates very smooth surfaces with an outstanding constant fit. Furthermore the press or cast objects can be divested gently and stress free – also with thin wall thicknesses. With the press over technique the objects of metal, zirconium oxide or porcelain are just embedded as well. Ceravety Press & Cast is proven to produce only very thin reaction layers with lithium disilicate ceramics.

Besides the speed investment this graphite free investment material can also be heated conventionally. As the expansion can be very well controlled, an ideal adjustment to the press and cast objects is possible.

BENEFITS

- For all press ingots (high and low-fusing)
- Very thin reaction layer with lithium disilicate
- Excellent adjustment to non-precious and precious alloys
- Smooth object surfaces
- Easy and quick divesting
- Outstanding expansion control
- Graphite-free
- Long working time

Indications

- Speed investment for pressing / press-over and casting procedures
- Also suitable for conventional heating

PN	Quantity	Product
6966	12 kg	Ceravety powder (120 x 100 g bags)
6968	3 kg	Ceravety powder (30 x 100 g bags)
6967	2,000 ml	Ceravety liquid (with measuring cup)
6969	300 ml	Ceravety liquid (with measuring cup)

LAMINA VEST II

Phosphate bonded investment for minimally invasive porcelain techniques

Lamina Vest II is a phosphate bonded investment for the production of refractory dies. Developed for the fabrication of porcelain inlays, veneers and crowns in the sintering technique, Lamina Vest II offers high strength and edge stability.

BENEFITS

Suitable for Vintage PRO, Vintage MP, Vintage Halo and Vintage ZR

Excellent fit of the porcelain restorations

Smooth surfaces

High strength and edge stability

High dimensional stability, even after repeated firings

Easy divesting

Indications

For all porcelains with a CTE range of $9.5-12.5 \times 10^{-6}K^{-1}$ (25 °C - 500 °C)

PN	Quantity	Product
6977	1.2 kg	Lamina Vest II powder (40 x 30 g bags)
6978	200 ml	Lamina Vest II liquid (with measuring cup)
6972	2 pcs.	Refractory marker

Porcelain Brushes

Long lasting natural hair and synthetic porcelain brushes with pleasant handling properties

The use of high-quality porcelain brushes is basic to a precise and time-saving buildup of natural tooth shapes. SHOFU natural-hair brushes feature fine, shape-retentive tips and a continuous release of moisture.

PN	Quantity	Product
6985	1 pc.	Porcelain Brush Set
6986	1 pc.	Porcelain Brush OP-0
6988	1 pc.	Porcelain Brush S-0
6989	1 pc.	Porcelain Brush S-1
6991	1 pc.	Porcelain Brush P-3
6992	1 pc.	Porcelain Brush P-5
6993	1 pc.	Porcelain Brush P-7
6071	1 pc.	Brush No. 5 (nylon)
7192	1 pc.	Brush No. A7 (natural hair)

The natural-hair brush A7 (A = animal hair) is therefore ideal for the application of larger quantities of porcelain and the creation of delicate details.

The synthetic porcelain brush no. 5, made of very fine nylon bristles, has proved itself as an “all-round brush” for any application in porcelain layering. It maintains these properties even when using mixing liquids that contain glycerin.

The [Porcelain Brush Set](#) contains an assortment of 6 natural-hair brushes for all porcelain applications:

- **OP-0** Flat natural-hair brush for an efficient application of paste opaque and opaque liners
- **S-0** Fine liner for staining, designed to create very fine natural colour accents
- **S-1** Ideal for the characterisation of pressed or milled porcelain objects
- **P-3** All-round brush for daily use
- **P-5** Classic porcelain brush for all requirements
- **P-7** Big Brush design with a fine tip

LIGHT-CURING C&B COMPOSITE SYSTEMS

Light-curing C&B Composite Systems

Light-curing crown & bridge composites should be characterised by aesthetic appearance, easy handling and polishability, high abrasion resistance and flexural strength, and virtually unlimited use. SHOFU has designed three unique hybrid-composite systems – Solidex, Ceramage and Ceramage UP – offering dental technicians optimum handling, aesthetic and mechanical properties for ease of use without any restrictions.

As an innovative manufacturer, always seeking to meet the wishes and needs of dental technicians, SHOFU has developed outstanding light-curing c&b composite systems for more than 20 years.

All three c&b composite systems are ideal combinations of modern science, long-term experience and impressive aesthetics, supported by an efficient layering concept with materials perfectly matched to each other.

SOLIDEX – the first alternative to porcelain veneering

In 1993, SHOFU launched Solidex, the first hybrid composite with a ceramic filler load of 53 % – a milestone in dental technology, since it was the first material of its kind to meet all requirements, thanks to its unique aesthetics, durability and efficiency.

The most remarkable features of this light-curing composite are its easy and efficient handling and its high colour stability. Even after more than 20 years, Solidex is still as excellent as ever.

CERAMAGE – aesthetic and durable as porcelain

In 2004, SHOFU's brilliant researchers and developers set a new, ground-breaking standard in dental technology with Ceramage. This light-curing, ceramic-based c&b composite with a filler load of over 73 % was the first material to combine very natural light transmission and shade reproduction with exceptional flexural strength (146 MPa).

Ceramage is the material that dental technicians really need: It withstands high stress and can be used for all anterior and posterior restorations.

CERAMAGE UP – highly durable, yet flowable and stackable

In 2015, SHOFU launched Ceramage UP to meet the need for a flowable, yet highly durable micro-hybrid composite suitable for free build-up. This high-performance restorative with a homogeneously compacted nanostructure and a flexural strength of 140 MPa is based on the proven Ceramage technology, which combines all the benefits of modern ceramics and composites.

The ready-to-use materials can be freely layered and sculpted (with a probe or a brush, directly after dispensing) and also mixed with each other just like porcelain shades. Besides, this light-curing c&b composite system is perfect for metal-free permanent inlays, onlays or crowns, thanks to its high abrasion resistance.

CERAMAGE UP

Flowable, light-curing micro hybrid composite for free build-up

This newly developed high tech material combines all positive properties of porcelain and composite. The coordinated layering concept with opalescent incisal and translucent compounds and their light optical properties imitating natural teeth enable aesthetic restorations that exhibit brilliance in all lighting conditions. The ceramic filled matrix and the homogeneously dense nano structure guarantee highest wear resistance, flexural strength and colour stability.

BENEFITS

- Virtually unlimited variety of indications
- Simple reproduction of all shades of the VITA* Classical Shade System
- Natural aesthetics and opalescence
- Excellent strength and abrasion properties
- Outstanding polishability and surface density
- Plaque resistance and shade stability

Indications

- Fully veneered crowns, bridges, telescopic and implant supra constructions
- Attachment works
- Occlusal restorations
- Inlays / onlays and veneers
- Long term temporaries
- Characterisation of denture teeth

The ready-to-use thixotropic compounds enable a free modulation of tooth shapes directly from the dispenser, with an instrument or a brush.

The individual materials are both flowable and stackable, easy to sculpt, contour and polish, and mixable with each other – for unlimited customisation options.

CERAMAGE UP - Sets and Single Components

8 Color Set

Basic assortment for restorations in the shades A1-A4, B2, B3 and C2

- Universal Pre-Opaque, 2 ml • 9x Universal Opaque, 2 ml each
- 4x Cervical, 5 g each • 8x Opaque Dentin, 5 g each • 8x Body, 5 g each
- 4x Incisal, 5 g each • 4x Translucent, 5 g each • Color Effect (Concentrate), 5 g
- Universal Oxy-Barrier, 10 g • Ceramage Finishing & Polishing Kit
- Dura-Polish, 20 g • Dura-Polish DIA, 5 g • Uni Brush No. 5
- 10 Dispo dishes • Pro-Pad mixing pad • light shield cover
- 30 tips and caps • 5 grips for syringes (dispenser) • colour table
- instructions for use

Note: Please order M.L. Primer additionally (see page 74)

2 Color Set

Economical introduction into the Ceramage UP technique for restorations in the shades A2 and A3

- Universal Pre-Opaque, 2 ml • 2x Universal Opaque, 2 ml each
- Cervical, 5 g • 2x Body, 5 g each • 2x Incisal, 5 g each • Translucent, 5 g

CERAMAGE

Light-curing micro hybrid composite

Ceramage contains 73 % by weight micro-fine ceramic particles, which are embedded in an organic polymer matrix and ensure excellent physical properties. The included light transmission is very close to natural dentine and enamel; hence Ceramage combines a natural colour reproduction with an extraordinary strength and elasticity and is the composite of choice for the production of any type of anterior or posterior restorations with any framework construction as well as highly stressed implant constructions.

info

Please use Pre-Opaque, Opaque and Opaque effect shades of the Universal Opaque system!

Further information on page 134

BENEFITS

- Excellent flexural and compressive strength
- Realisation of abrasion resistant occlusal facings
- Aesthetics by a tooth-like light refractive index
- Extensive range of translucent effect colours
- High colour stability
- Perfect viscosity and modelling properties
- Superb polishability and plaque resistance
- Biocompatible

Indications

- Fully veneered crowns, bridges, telescopic and implant-supported restorations
- Precision attachments
- Occlusal facings
- Inlays / onlays
- Veneers
- Long-term temporaries
- Modifying conventional acrylic teeth

AB Set

SOLIDEX

Proven light-curing hybrid composite

Solidex features a ceramic filler load of more than 53 % and has proved its reliability as a c&b material in years of clinical use. It is characterised by high abrasion resistance and well-balanced elasticity, and almost unconditionally recommended for numerous anterior and posterior indications.

Indications

- Crowns and bridges, telescopic and tapered crowns
- Attachment works, implants
- Long-term temporaries
- Occlusal facings (up to 2nd premolar)
- Veneers, inlays, onlays in the premolar region
- Modifying conventional acrylic teeth

BENEFITS

Pleasant viscosity and modelling properties

Porcelain like aesthetics

Very good polishability and colour stability

PN	Quantity	Product
1500	1 pc.	Solidex 8 Color Set

LITE ART

Light-curing paste stains

The light-curing paste stains are fluorescent, can be applied almost as thin as porcelain and cure fully after short curing time due to newly developed multifunctional monomers and photo initiators. Lite Art stains adapt perfectly during the application of internal colour modifications in resins, composites, artificial teeth or hybrid ceramics. Simply by covering the polymerised stains with an incisal or translucent composite layer, fine and very specific natural internal accents will be achieved.

BENEFITS

- Microfine particle structure
- Homogeneous consistency
- Extraordinary covering properties with thin layers
- Highly fluorescent
- Economical use by thin tip of cannula

Indications

- Characterisation of ceramic reinforced and conventional composites as well as hybrid ceramics**
crowns / bridges, veneers, inlays / onlays
- Colour adaptation of artificial teeth**
composite teeth, acrylic teeth
- Individualisation of denture bases**
partial dentures, gingiva coloured composite of telescopic and implant works, full dentures
- Harmonisation of temporary frameworks and tooth coloured acrylics**
PMMA frameworks, long-term temporaries

Extraordinary covering properties enable a lifelike adjustment of artificial teeth with thin layers.

Natural fluorescence

Lite Art paste stains have a fluorescence quite similar to natural teeth. Their natural effect persists even under artificial light conditions.

Under natural light conditions

Even dark colours show vital and natural reflections under ultraviolet light

1986	6 ml	Lite Art Clear Liquid

Note: Clear Liquid is not suitable for bonding.

Full Set

Contains all components for authentic and individual characterisations of resins and ceramic reinforced composites

- 15 shades, 1 ml each • Uni Brush No. 5 • Lite Art Clear Liquid, 6 ml
- 15 cannulas • 15 caps • colour table
- instructions for use

The stains can be dosed economically or even applied directly to the restoration by the fine nozzle tips.

The transparent Lite Art Clear Liquid is used to modify the colour intensity or dilute the stains when required.

SHOFU Universal Opaque

Light-curing paste opaques for Ceramage UP, Ceramage and Solidex

The light-curing paste opaques of the SHOFU Universal Opaque system offer excellent masking properties and bonding strengths to all commonly used dental alloys, due to optimised micro-fillers. The thixotropic properties make the pastes soft and flowable, they are applied very easily and quickly.

BENEFITS

- Universal use
- Easy and quick application
- Excellent masking properties
- Durable bond

This ready-to-use opaque system, consisting of one Pre-Opaque and 31 Opaque shades, can be used as a base for the reproduction of any shade of the Ceramage UP, Ceramage and Solidex composite systems, as well as in combination with other crown and bridge composites.

Indications

Masking of frameworks made of precious and non-precious alloys

ARTIFICIAL TEETH

Veracia

Composite teeth for full and partial dentures

The sculptured tooth shape and anatomical design of Veracia anterior and posterior teeth guarantee multifunctional purposes and provide an unlimited suitability for all standard setup techniques of full and partial dentures.

Veracia artificial teeth cannot be compared to conventional acrylic teeth. Based on the technology of the proven Solidex c & b composite system, the teeth consist of micro filled hybrid composite. By combining organic and inorganic fillers in the composite matrix, an extraordinary abrasion resistance is achieved.

Indications

- Full denture prosthetics
- Implant restorations
- Telescopic restorations
- Attachment work
- Cr-Co dentures

BENEFITS

- Lively surface structure, matching the morphology of natural teeth
- Multifunctional use for all standard set-up techniques
- Limited variety of moulds for easier choice of anterior and posterior teeth as well as economical storage
- Excellent match with the VITA* Classical Shade System

Setup techniques

- Tooth to tooth occlusion
- Tooth to two teeth occlusion
- Balanced and lingualised occlusion
- Incisal and canine-guided occlusion
- Sequential guidance

Veracia SA

Semi-anatomical artificial teeth and wax-free setup support

The semi-anatomical tooth line Veracia SA is based on the fully anatomical tooth line Veracia. The functional characteristics of the Veracia teeth were preserved while precisely predetermined sectors were provided with abrasion zones. The result is a substantially improved chewing performance, a pleasant wear comfort of the stabilised denture and a substantial lower level of stress for the jaw joint.

The wax-free assortment holder with an integrated setup support Q³ Pack allows an effortless posterior teeth setup in perfect function and quality. The setup support contains single posterior teeth, allowing individual adjustments. A combination with the fully anatomical Veracia anteriors is possible.

BENEFITS

- Age based and functional teeth
- Not bound to any occlusion concept
- Saves you setup time
- Balanced occlusion just by setup
- High level of user reliability
- Efficient fabrication in the dental laboratory
- Constant high quality of dentures

Indications

- Full denture prosthetics
- Implant restorations
- Telescopic restorations
- Attachment work
- Cr-Co dentures

Setup techniques

- Balanced occlusion
- Lingualised occlusion
- Tooth-to-tooth occlusion
- Tooth-to-two-teeth occlusion

DENTAL CAMERA

EyeSpecial C-II

Digital camera for professional dental photography

The EyeSpecial C-II camera was especially developed for the use in the dental surgery or laboratory and meets all demands of dental photography, be it routine, risk or orthodontic cases, be it intraoral, patient documentation or in-lab use. The ergonomically designed compact camera is smart, ultra-light, does not require any accessories like external flashes and can be held with just one hand.

BENEFITS

- Easy handling with 8 preset shooting modes
- Anti-shake technology
- Precise and accurate images with impressive depth of field up to the second molar
- One-hand operation
- Water resistant and disinfectable
- Only 465 g total weight

With a 12 megapixels sensor and 5 times optical zoom, the camera is state of the art; it combines an easy and secure handling with a wide range of applications.

Eight preset shooting modes guarantee brilliant image quality from any angle. The LCD touch screen and the intuitive display facilitate the handling.

PN	Quantity	Product
5130	1 pc.	EyeSpecial C-II incl. accessories

The scope of supply includes:

- 49 mm close-up lens by Kenko, lens cap
- 4 GB SDHC memory card
- Video cable
- Hand strap
- SHOFU grey card
- 4 AA batteries
- Instructions

info

A few samples of photos taken with the camera can be seen on

page 13: Dura-White

pages 16-17: Brownie, Greenie, Supergreenie

page 23: CompoSite Fine

page 28: Super-Snap

page 33: CompoSite Polishing Paste

Features at a Glance

- 3.5 inch LCD touch screen
- Compatible with Wi-Fi SD card for instant image transfer to wireless devices
- Built in auto-focus with 5x optical zoom
- Anti-shake function
- Contrasting intraoral pictures in brilliant quality
- Proprietary FlashMatic system with automatic flash adjustment
- Accurate rendition of dental shades
- Auto cropping function
- Built in infra-red, UV and anti-reflection filters
- Water and chemical resistant frame

Modern design, ergonomic handling

Contrary to bulky SLR cameras, this ultra light compact camera doesn't require additional accessories like flashes or lenses and can be operated with one hand, freeing the other to hold the cheek retractor or mirror. The EyeSpecial C-II allows you to effortlessly capture precise dental images anytime and anywhere you are.

Comfortable, compact and compatible

Easily captured and scrolled through: The images can be viewed on the 3.5" LCD touch screen display with its intuitive menu and the desired options chosen. With help of the playback programme the images can be rendered and specific areas of the image can be marked.

Isolate shade

For optimal shade matching, gingival shades can be automatically blocked out to improve the visual acuity of the tooth colour. This shooting mode is a convincing patient communication tool as all minor defects and imperfections on the tooth surface are visible.

EQUIPMENT AND ACCESSORIES

Solidilite V

Light-curing unit for the dental laboratory

With an extraordinary high light output of 600 W and an effective heat conduction system, the Solidilite V ensures gentle curing with short exposure time. Four powerful halogen lamps, 150 W each, with a light wave spectrum of 400-550 nm, guarantee efficient and secure curing in the compact polymerisation chamber.

The polymerisation in the Solidilite V starts very gently. The halogen lamps will reach full power after 2 to 4 seconds. The duration of performance and intensity of the lamps are greatly extended with this soft start function.

The height-adjustable turn table provides shadow-free exposure due to an ideal alignment of the restorations to the light source.

BENEFITS

- Easily operated
- Three light exposure programmes (1 / 3 / 5 min.) as well as individual settings
- Shadowless curing of the objects
- Efficient heat conduction system
- Electronic counting of operating hours
- Soft-start function

Material Properties

- Light source: 4 halogen lamps JCR 110V 150W
- Dimensions: 23 x 25.2 x 35.4 cm (W x D x H)
- Weight: approx. 9.5 kg
- Fuse: 2x 3.15 A, time-lag
- Rated supply voltage: 100-240 V, 50/60 Hz
- Spectral range: 400-550 nm

Indications

Polymerisation of light-curing c&b composites

PN	Quantity	Product
5106	1 pc.	Solidilite V
5610	1 pc.	Halogen lamp 150 W

Sublite V

Preliminary polymerisation light for the dental laboratory

The high performance Sublite V is the sensible match to the Solidilite V light-curing unit for a time-saving and professional pre-polymerisation. The 150 W halogen lamp's efficient performance allows a pre-polymerisation of an applied composite layer in just 5 seconds. The comfortable one hand operation and the ample opening below the blind also allow the positioning of restorations on the working model.

Indications

Preliminary curing of light-curing c&b composites

PN	Quantity	Product
5108	1 pc.	Sublite V
5610	1 pc.	Halogen lamp 150 W

BENEFITS

- Time-saving pre-polymerisation on the working model
- Convenient one hand operation
- Two light exposure programmes (5 sec / max. 20 sec)
- Light guard horizontally and vertically adjustable

Material properties

- Light source: 1 halogen lamp JCR 110V 150W
- Dimensions: 11.2 x 21 x 25.2 cm (W x D x H)
- Weight: approx. 2.5 kg
- Fuse: 2x 1.6 A, time-lag
- Rated supply voltage: 100-240 V, 50/60 Hz
- Spectral range: 400-550 nm

Post Stand P ■ Post Set

Tray and Pin Set

Post Stand P

Two crossing central ditches extending down to the bottom of the Post Stand and more than 100 holes allow – combined with the matching pins – an exceptionally fast and simple positioning of the restorations, from single crowns up to 14 unit bridges. Dimensions: ø 60 mm / h 23.5 mm

Post Set

The set includes five different shapes, 3 each, for any kind of restoration:

- **Anterior Post A** (cone shaped) and **Anterior Post B** (wedge shaped) for anterior crowns
- **Posterior Post A** for premolars
- **Posterior Post B** for molars
- **Free Post** can be grinded to any desired shape

By decentralised shanks and rotatability the space between the posts can be individually adjusted.

Indications

For stable placement of restorations in dental lab light-curing units

Ceramosonic S

Ultrasonic condensing unit for porcelain build-up

The Ceramosonic S generates high-frequency vibrations (28,000 vibrations/sec), thereby providing a directed condensation of moist porcelain particles, while the built-up layer with all details remains unchanged. Compared to a manual or mechanical condensation a considerably more homogeneous structure in the porcelain material is achieved.

Operating modes

- Automatic mode: vibration continues for 5 seconds after touching the vibration platform
- Standby mode: standby for 60 minutes
- Continuous mode: continuous operation for 2 minutes

Before condensation

After condensation with Ceramosonic S the layers as well as the contour keep their shape

BENEFITS

- Better control during the build-up phase and condensation of the porcelain material
- More brilliant colours by reduction of air inclusions
- Identical thermal transmission of porcelain layers to the all-ceramic framework
- Higher bonding strength on metal-ceramic and all-ceramic frameworks
- Time saving by less shrinkage and fewer correction firings
- Higher internal firmness of the porcelain layers

Indications

Ultrasonic condensing of the moist porcelain build-up before firing
