Sitting with care

ScoreMedi, seats to suit!

At ScoreMedi the health of people, patients and caregivers is foremost. Every day, we strive to improve the quality of the workplace. We develop and produce ergonomically sound business chairs, hospital chairs, devices and accessories.

ScoreMedi is part of Score, a company with nearly four decades of experience. Over the course of those 40 years we have honed our **expertise in the field of healthy sitting**. Our chair manufacturing plant, office and R&D department are located in Tolbert, The Netherlands. We are **proud** that we are able to make our products in the Netherlands. **Made in Holland.**

Our **own team of product developers** works non-stop on new products and product improvements. Customers and care institutions derive many benefits from the true craftsmanship that exists at ScoreMedi. Many development and improvement ideas for workplaces are created in **collaboration with partners and medical professionals** from hospitals and other care facilities. Prototyping, testing and ongoing development all take place in Tolbert. The same applies to production, assembly, sales and customer service.

ScoreMedi is a market leader in the Netherlands and is active in many overseas markets. Our products are exported to over 50 countries worldwide: from Scandinavia, Europe and Asia to down-under in Australia. You will also find Score products in America and Africa. ScoreMedi advocates:

- continuous product innovations
- high-quality industrial design
- ergonomic design, according to high international standards
- collaboration with ergonomists and medical specialists in hospitals and beyond
- a complete product range
- the best solution for each workplace and user
- custom solutions made possible by own production in the Netherlands
- free seating and workplace analysis

Hospital chairs

The hospital chair from ScoreMedi: suitable for the specialist and his specialism

- Comfort through choice of various **professional armrests, backrests and lumbar supports**.
- Choice of multiple upholstery possibilities: different types of fabric, polyurethane, Stamskin or PUxx. ScoreMedi offers you the right choice for every work situation!
- With a traditional **round seat** or a Score **Ergoshape seat** with recess for the thighs to prevent the stagnation of blood circulation.
- High-quality **PUxx antibacterial upholstery: 100% waterproof, fire resistant** and free of phthalate, vinyl and PVC. PUxx can be **disinfected** with chlorine, hydrogen peroxide or alcohol solutions

Choose your seat

The medical profession deserves to take a healthy, comfortable seat.

Above all, a good chair should be a **pleasure to sit on**. At ScoreMedi we believe that **everyone is entitled to a convenient workplace**, whether you are a physician, surgeon, anaesthetist, nurse or other medical professional. At ScoreMedi you will find the seating solution that is right for you and your workplace. Sitting will not only be comfortable, but also good for your health.

The functional use of a hospital chair or stool has been investigated extensively by the product developers at ScoreMedi. In our own testing facilities we perform **pressure measurements, endurance tests** and we simulate everyday seating arrangements that are found in a medical work environment.

Round seat

The traditional round seat is functional if a person is able to work with a knee angle of 90° and the thighs are horizontal. If you sit higher than that, the edge of the seat cuts into the thighs.

In this case, the higher ScoreMedi 6100 Medical Line offers a solution. It has a round seat, standard fitted with moulded foam. If you use it in combination with a forward-tilting seat, you avoid the edge of the seat cutting into the thighs (Photo 1).

photo 1:
Pressure test
6100 Medical
line (round
seat)

Ergoshape seat

The Ergoshape seat, with recessed edges for the thighs, was designed by ScoreMedi to prevent pinching of the thighs (Photo 2). If you sit on a hospital chair or stool for any length of time, or you often alter the height of your chair, or you sit on a stool with a knee angle exceeding 90°, you are better off choosing the 6300 Medical Line with an Ergoshape seat.

photo 2:

Medical saddle chairs

Support your natural position for optimal relaxation during strenuous work

- Stand-sit, sit-stand.
- No more fatigued or pinched legs anymore. By the spreading of your legs your pelvis tilts and your spine aligns itself in the correct position, which means you **automatically sit correctly**.
- The compact base and castors **permit you to move around the patient with ease**.
- The medical saddle chairs from ScoreMedi are available in two versions: **Jumper** with a **wide seat**, and **Amazone** with a **narrow seat**.

Optimal Hygiene

- The medical saddle chairs from ScoreMedi can be supplied with high-quality **PUxx antibacterial upholstery** and are easily **disinfected** with chlorine, hydrogen peroxide, and alcohol solutions.
- The seamless upholstery prevents dust accumulation.
- Optionally, a smooth base can also be supplied for **extra hygiene**.
- You can adjust the height of the saddle chair with **foot control**, without having to use your hands.

How do you sit properly?

In 1978, NASA published a study on the natural posture of humans in a weightless situation. The goal was to create an optimal workplace in space. The working posture of an astronaut is not straight or angular. Instead, the hips are at a wide angle and the legs are slightly spread.

On earth this natural posture of the astronaut is the foundation for a healthy sitting posture. ScoreMedi saddle chairs have been designed for a hip angle between 120° and 135° . You sit higher and the pelvis tilts slight forward, which has a positive effect on the posture of the spine. Gravity now has less impact because the head, spine and the pelvis are aligned. The shape of the saddle supports straddling of the legs for a relaxed sitting posture.

The ScoreMedi saddle chair is ideally suited to approximating this weightless situation — also called 'Zero Gravity'.

Innovation of the Score Balance

Score saddle stools are available in several types, heights and sizes. Unique is the Score Balance mechanism that allows the saddle seat to follow the movements of your body dynamically. Our Balance mechanism makes the border between sitting and hovering fade. A little Zero Gravity on earth.

Jumper & Amazon Saddle Seat

On a saddle chair your legs are slightly spread, which tilts the pelvis forward and lets the spine take on a healthy, neutral position. Score gives you a choice of two seat types. The Score Jumper has a wide saddle seat. The Score Amazon is slightly narrower and rounder than the Score Jumper. Choose the shape that makes you sit comfortably.

That is how you sit properly!

Score started marketing the first saddle chair back in 2001. The theory about a wide hip angle had already existed for a few decades, but the development of a comfortable chair that could simulate this seating arrangement with straddled legs required a revolutionary development.

Saddle chair

Stand-sit, or sit-stand? It does not matter. The saddle chair makes working with support at a higher treatment couch or table possible. On a saddle chair your legs are spread, which tilts the pelvis slightly and lets the spine take on a healthy, neutral position. On a saddle chair the lower legs are never pinched and the pressure points are located on the buttocks (Photo 1). By opting for the Balance mechanism you constantly move on the saddle chair and your pressure points will be under less loading.

Photo 1:
Pressure test saddle chair with Balance mechanism (Score Amazone saddle chair)

In addition to medical saddle chairs, ScoreMedi also has medical stools in its range for a healthy sitting posture (see page 6).

What's learnt in the cradle, lasts till the tomb

'Health' is the primary motive for employees at ScoreMedi. By your fortieth birthday you start realizing that good posture can reduce and even resolve problems. Does this apply to you? You're not the only person with back or neck problems. In 2014 the expression **"Sitting is the new smoking"** was launched to draw attention to the issue of sitting in the workplace.

By designing and manufacturing good seating solutions and accessories, Score has been able to offer many people a good workplace. Fortunately, young people are already made aware of a healthy seated posture during training and that this is crucial to **fewer problems and pain in the future**. Score has already supplied many chairs, stools, saddle chairs to schools, universities and hospitals at home and abroad.

Should you sit or stand at work?

Standing at work

Stand for a maximum of 1 hour. If you can alternate this with walking, take a rest after 4 hours by sitting down. Standing at work, with your head or torso bent forward, is a major cause of neck problems.

Sitting at work

Sit for a maximum of 2 hour consecutively. Try to move around for a few minutes every half an hour, for example by fetching a glass of water. Make sure you have good support while sitting, but do not “lock up” in one position. Movement while sitting is good.

High workplace solutions

Standing aids, saddle chairs, elevated work chairs with a footrest, (laboratory) chairs with a footrest and footrest.

Solutions for seated work

Adjustable office chairs, ergonomic work chairs, various mechanisms for dynamic seating, laboratory chairs, stools, footrests and leg supports.

ScoreMedi solutions for healthcare

Saddle chairs with foot control, various types of armrests for supporting the forearms, phlebotomy chairs with adjustable armrests, feeding chairs, MediMove® patient chair, Compact Carrier base, Medical Swing Support, chairs specifically designed for the workplace, etc.

Tip for work in a crouched position

For work where you have to sit low to the ground, for example while working with children or when helping a patient putting on stockings, Score has the Pico stool (see page 19).

Sit stand stools

Sit stand stools

Sit stand stool 232

- Height adjustment 55-80 cm
- Worksurfaceheight 80-100 cm
- Steel base, black finish ø 60 cm

Sit stand stool 2232

- Height adjustment 58-83 cm
- Worksurfaceheight 80-100 cm
- Aluminium base ø 68 cm

Sit stand stool 4232

- Height adjustment 67-92 cm
- Worksurfaceheight 90-100 cm
- Suitable for workplaces with extreme lack of leg space

Steady

- Height adjustment 66-83 cm
- Worksurfaceheight 90-100 cm
- Foldable footrest base

Standard model and adjustments

Steel base, black finish ø 60 cm (232)

Aluminium base ø 68 cm (2232)

Adjustable seat angle

Protective glides

Trumpet glides

Soft castors brake loaded

Options with surcharge

Phlebotomy chairs

- **Various armrests**, from fixed angle to fully adjustable.
- Phlebotomy chairs that **fit into small spaces**.
- Chairs with **Trendelenburg** position, for situations where blood must flow to the head quickly.
- Side chairs for the phlebotomy nurse.

Vena standard

The basic model from our phlebotomy chair series can be used practically anywhere given its compact design.

- Height adjustment 44 – 57 cm
- Trumpet glides
- Aluminium base ø 60 cm
- Including 1 armrest M PU fixed

Vena Vario

A comfortable phlebotomy chair which can be simply transformed in an instant into a "Trendelenburg" position when the patient feels unwell. At the same time as tilting the back, the leg rest rises up. Get up brackets are optional but make life easier for elderly patients. This phlebotomy chair can additionally be fitted with castors equipped with a brake. Optional are the adjustable armrests M PU.

- Protective glides
- Provided with legrest
- 4-Foot steel base, grey
- Fixed seat height: 46 cm
- Including 2 armrest M PU fixed

Vena Hydro

While the patient sits in the chair, it can be raised to the desired height with the hydraulic height adjustment system. Especially for elderly patients, this can make it easier to get in and out of the chair. This phlebotomy chair can additionally be fitted with wheels and a brake. Optional are the adjustable armrests M PU.

- Trumpet glides
- Aluminium base ø 70 cm
- Hydraulic height adjustment 45-62 cm
- Backrest can be tipped up to 30°
- Gaslift with rotation lock
- Including 2 armrests M PU fixed

Vena Hydro Nucleo

This is used in the nuclear medicine department, for example to make an echo of the thyroid gland. The Vario armrest allows the patient to rest his/her arm and relax while the radiopharmaceutical is injected into a blood vessel. During the scan (10 min.), the patient must keep his/her head perfectly still. The headrest has been designed so that the head fits in exactly and thus remains fixed. While the patient sits in the chair, it can be brought to the correct height with the hydraulic height adjustment system.

- Trumpet glides
- Aluminium base ø 70 cm
- Hydraulic height adjustment 45-62 cm
- Gaslift with rotation lock
- Including 1 armrests M PU adjustable

Anna Lankinen – ISLAB
& Oskar Yläanko – Ergotekniikka Tualitalo OY

Creating a Mini Phlebotomy Chair together

“Working with ScoreMedi helped us to find new ways of thinking”

The Finish laboratory enterprise, ISLAB, launched a project aimed to reduce the number of physical problems amongst biomedical laboratory scientists in 2012. The project included an awareness program and a quest for ergonomic solutions at the blood science lab. Physical complaints included pain in the lower back, neck, legs, wrists and fingers. ISLAB asked ScoreMedi’s Finish partner, Ergotekniikka Tuolitalo OY, to help out on different ergonomic challenges.

Anne Lankinen, responsible for occupational health and ergonomics with ISLAB invited Oskar Yläanko of Ergotekniikka and export manager Tom Smit of ScoreMedi to examine the local situation and to give advice for improvement. They encountered very small spaces for blood sampling areas. A strong wish for a phlebotomy chair that could be operated by scientists in while sitting down as well as standing up was listed. Then there was a need for a phlebotomy armrest that could be adjusted by just one hand. Lankinen of ISLAB realized that the challenges where clear, however the solutions where not available. ISLAB asked Ergotekniikka and ScoreMedi to develop the perfect chair for them.

ScoreMedi, in close cooperation with Ergotekniikka, designed and produced a new, mini phlebotomy chair (MPC) with a small phlebotomy armrest (ETS). The ETS armrest supports the patients upper-arm and elbow. The armrest is rotatable and an easily, single handed, adjustable in height. The MPC chair including two ETS armrests, fits within a circle of 70cm. Because a patients sits higher in a MPC chair, it is easy to get in and out of the chair. The scientists have a choice to sit down on or to stand up while sampling blood.

Anna Lankinen confirms that cooperating with Ergotekniikka and ScoreMedi was extremely smooth: “They listened to what we needed and wanted”. During the development stages the team of ISLAB was involved and prototypes where presented. Lankinen: “The involvement during development made our ideas concrete and helped us to find new ways of thinking.” The MPC chair with the ETS armrest was introduced during the fall of 2014 and within a year purchased by all mayor blood sampling institutes in Finland.”

Fixed phlebotomy armrests

- Basic armrest for phlebotomy chairs.
- PU is standard. Also available in various fabrics.

Adjustable phlebotomy armrests as standard or shortened

- Adjustable armrest for phlebotomy chairs.
- Fully rotatable and height adjustable for the comfort of patient and nurse.
- PU is standard. Also available in various fabrics.

MPC armrest

- Very compact phlebotomy armrest.
- Adjustable with one hand.
- Working at height. Even standing blood collection is possible.
- With comfortable, removable armrests.

360 support

- 360° rotatable armrest/backrest.
- Easy to move out of the way
- For supporting one or both arms.

Also for the ScoreMedi saddle chairs (Jumper & Amazone)

Armrest 6

- Developed for precision work (e.g. laboratory work or microsurgery).
- The round shape supports a firm fit around your body.
- Optional inverted mounting as shorter armrest 9.

Armrest 9

- Large armrest, also suitable for feeding babies.
- The round shape supports a firm fit around your body.
- Support for the entire forearm.
- Optionally, on some chairs the armrest can be folded over backwards (Swing Support).

Armrest 5 / Armrest 5 XL

- Adjustable width and height
- multi-deployment on various Score work chairs.
- Also available in ESD version.

Score At Work 4D armrest

- 4D adjustable: height, width, depth and rotation adjustable.
- Wide and narrow soft pads for resting of the arms.

Armrest 8

- 4D adjustable: height, width, depth and angle adjustable

Also for the ScoreMedi saddle chairs (Jumper & Amazone)

Get-up brackets

- Simple stand up after treatment
- Extra firm support
- Easy and safe to get in and out of the chair

Score MediMove®

Comfortable, easy transport, cost-effective

Comfortable

The MediMove® is very comfortable for both patient and caregiver!

MediMove® Go is manually operated.

MediMove® Plus has electric height adjustment.

Both models are easy to adjust and come standard with the Trendelenburg: from sitting to lying down in 2 seconds. Equipped with easy to clean and bacteria-resistant upholstery.

Multifunctional

The MediMove® can be used anywhere. Depending on the desired treatment, the chair can be expanded with many options and accessories.

Save space

Thanks to the compact dimensions, more MediMove® patient chairs can fit in a room than hospital beds.

Easy transport

Quick and easy transport between wards saves time and is more convenient when compared to transport by bed. A Patient can also receive treatment in the MediMove®.

Bacteria-resistant fabric

The MediMove® is easy to clean and disinfect so no bedding has to be washed. This saves money and is good for the environment.

Both models are suitable for many wards, treatments and healthcare locations:

Phlebotomy • Dermatology • Internal Medicine • ENT Medicine • Pulmonology • Gastroenterology • Neurology • Ophthalmology • Radiology • Rheumatology • Rehabilitation Medicine • Urology • Orthopedics • Orthodontics • Geriatrics • Pain Center • Pain Rehabilitation • Rehabilitation Center • Thorax Center • Prenatal screening/ultrasound examination • Plaster Room • X-ray • Cardiology • Care Center • etc.

Choose the MediMove® patient chair because:

- easy to move
- very comfortable when sitting and lying down
- retractable armrests for easy transferring of patients
- Trendelenburg: -7° reclining, from seated to reclined position in 2 seconds
- MediMove® Plus: standard electric height adjustment (to bed height)
- steplessly adjustable backrest
- CE Certified
- options:
 - removable headrest
 - legrests are independently adjustable
 - phlebotomy armrests
 - DIN rail
 - foot rest
 - IV pole
 - central foot brake on rear wheels
 - tabletop

ScoreMedi, sitting with care

ScoreMedi designs and manufactures seating solutions and related accessories to enable health care workers and patients to sit in a more comfortable and healthy manner.

ScoreMedi has its own R&D team that develops innovative seating solutions from drawing board all the way through to production, with products made available only after extensive practical tests.

The innovative Score MediMove® concept was developed in collaboration with a variety of hospitals and health care workers. Comfort, ease of use and cost effectiveness are at the core of the design.

ScoreMedi is a sister company of Score BV. Score has been the market leader in ergonomic seating solutions and accessories in the Netherlands for over 40 years. Internationally, Score is a reputable company that offers seating solutions in a wide variety of work places.

MediMove® Go

- fixed height
- synchronous operated backrest and leg rest
- independently operating back and leg rest (option)
- Trendelenburg reclined position (-7°)
- retractable armrests

MediMove® Plus (electric)

- electric height adjustment (to bed height)
- synchronous operated backrest and leg rest
- independently operating back and leg rest (option)
- Trendelenburg reclined position (-7°)
- retractable armrests
- electrically operated backrest (optional)

Patient chairs and Medical devices

Continue functioning with a (temporary) handicap

- **Leg supports** for **stretching out one or both legs** while working.
- **Chairs for mobility** at work or in the home if walking is not possible.
- **Arthrodesis chairs** with individually adjustable leg supports, for people with a **stiff leg or difference in leg length**.
- **Artromove** exercise chair for people **with hip osteoarthritis**.

Patient chairs and Medical devices

Feeding chair Nutrimax

Developed for nursing personnel giving bottle feeds and fitted with specially designed armrests. They are easy to adjust, and can be swung aside when sitting down or standing up. As not all nurses are the same height, the chair is equipped with a telescopic height adjustment system, allowing the chair always to be positioned at the right height. The synchro mechanism allows the chair to be used as a rocking chair. In addition, the chair can be fitted with a headrest, wheels that brake under load or trumpet feet.

- height adjustment 39-54 cm
- including armrests type 9
- synchro mechanism

Mammography chair

While the patient sits in the chair, the hydraulic height adjustment system can bring the chair to the desired level. The chair is brought close to the mammography scanner and then the wheels are locked, to keep the chair in the exact position. The footrest not only offers good support, it allows the chair to be brought close to the device. The armrests can be folded away, which is particularly beneficial for wheelchair-bound patients.

Mammography chair, Compact Carrier

Especially designed for patients requiring a mammogram

- Hydraulic height adjustment 45-62 cm
- Fixed foot bracket
- Gaslift with rotation lock
- Armrests that can be pushed backwards
- Central brake for all four wheels

Compact Carrier

Compact frame that enables to get closer to the patient

- Can be provided with almost all seats
- A permanent rotation lock on the seat
- Hydro pump with foot control
- Central brake for all four wheels

You cannot avoid hip surgery, but you can delay it

Richard Lennartz was diagnosed with hip osteoarthritis at the age of 37 years. A difficult challenge for an athletic young man. Richard wanted to enjoy life. In his book "My hip under control" he describes the various opportunities that he has in living with hip osteoarthritis. In conjunction with Jan Joost Versteeg, a physiotherapist in Veenendaal, the Netherlands, Richard thought of a way to perform internal rotation exercises independently. They asked Score to manufacture this stool.

With hip osteoarthritis the inward movement of the leg, is the first impediment that arises. Moving becomes more difficult, especially in extension. Performing exercises makes the joint capsule more flexible, walking is easier and you will experience daily relief.

The Artromove is a device that works in combination with the ScoreMedi saddle chair. The hip takes on the correct position, extending downwards. By moving around for about 20 minutes every day with the help of the Artromove, you have already performed the internal rotation exercise. Versteeg: "So, you don't need a therapist for this exercise. You can use the Artromove every day, for example during work or in the afternoons while drinking a cup of tea."

The Artromove is preventative and a good assistive device pre-surgery. Versteeg remains realistic: "Orthopaedists want to postpone surgery for as long as possible. With proper exercise therapy you could even extend this by seven years, until the time eventually comes when the hip absolutely requires surgery."

Jan Joost Versteeg
physiotherapist

Versteeg enjoyed working with ScoreMedi: "At ScoreMedi a team of professionals collaborate during the development process. We came up with a fairly complicated mechanism. Then someone at ScoreMedi came up with a very good, but simple idea. That was exactly what we needed to be able to make the Artromove."

Score At Work

One chair concept, many possibilities

Modular means that you create your own chair by choosing from various components and materials. So you can furnish one room with chairs that all have the same appearance, but are **custom made** for the person who sits on the chair daily. A narrow seat or a broad seat? A normal backrest or a higher backrest? Colour, height range and perhaps most important: the adjustments for the seat. So there is no single standard Score At Work chair. **You set the standard.**

Contact

Fixed seat angle and permanent back contact, adjustable back pressure, with 4 fixed positions.

Synchromatic

Synchronous setting of back and seat, automatic back pressure setting of back based on weight, with fine adjustment, with 4 fixed positions.

Flowmatic

Independently moving back and seat, automatic back pressure setting of back based on weight, with fine adjustment, with 4 fixed positions.

Score At Work can be deployed in the office, as a desk chair, in laboratories, as an ESD chair, on the work floor, in a production area and in many other places.

The Jumper and Amazone Cleanroom saddle chairs are unique!

ScoreMedi has saddle chairs available for dust-free rooms. During initial development the first choice was to operate with a HEPA filter to seal the air holes in the saddle seat. In close collaboration with one of our suppliers, we opted for a high-tech quality cloth filter that is applied to the seating area. This has the advantage that the saddle seat can still breathe. In addition, the protruding section of a HEPA filter is not needed. ScoreMedi Cleanroom saddle chairs CLR are also suitable for ESD workplaces.

The CLR saddle chair has been extensively tested by the Fraunhofer Institute and certified for use in class 3 cleanrooms, based on the ISO 14644-1 guidelines.

A size bigger

Excess weight and obesity are becoming increasingly common. Finding a suitable chair can be a challenge. ScoreMedi caters for this with the special MaXXLine. Both for the office and for the waiting room.

MaXXLine for the Obese practitioner

The MaXXLine has been specially developed for people who have to deal with excess weight and obesity. The chairs are suitable for people up to 250 kg. The three MaXXLine models vary in size and width. All MaXXLine chairs are covered in comfortable wool. The seat and backrest are optically reduced with the use of leather inserts, which also prevent the edge of the seat cutting into the skin.

The MaXXLine has been tested by the Dutch Obesity Association and certified as “a sound, stable and comfortable office chair”, (Dutch Obesity Association, Sept. 2012).

Waiting room chairs for the Obese person

Score has developed a waiting room chair especially for overweight people. Extensively tested and manufactured in the Netherlands, naturally. Load capacity up to 250 kg.

For tall people or people who weigh between 120 kg and 150 kg, the Score 5000 is an alternative (page 57)

MaXX S

- Height adjustment 47-61 cm
- Worksurfaceheight 70-80 cm
- Seat appr. 50 x 53 cm (W x D)
- Back appr. 46 x 50 cm (W x H)
- For people up to 250 kg

MaXX M

- Height adjustment 47-61 cm
- Worksurfaceheight 70-80 cm
- Seat appr. 57,5 x 53 cm (W x D)
- Back appr. 46 x 50 cm (W x H)
- For people up to 250 kg

MaXX L

- Height adjustment 47-61 cm
- Worksurfaceheight 70-80 cm
- Seat appr. 65 x 53 cm (W x D)
- Back appr. 56 x 50 cm (W x H)
- For people up to 250 kg

Waitingroom chair MaXXLine

Footrests

Constant proper support for feet and legs

Do you work at a high desk or are you slightly shorter, meaning your feet don't touch the ground? Then proper support for your feet is of essential importance. When your feet are left dangling, the blood circulation in your legs is disrupted. You will suffer from tingling in your feet or legs and these could even go numb, with all the adverse consequences. The solution is a good ScoreMedi tilting footrest. You can always adjust ScoreMedi footrests to the correct height with your foot, even while you are seated. The footrests are robust, have ample foot area and a surprisingly large adjustment range.

Quality and warranty

ScoreMedi footrests have been developed with the utmost care and are made in our factory in the Netherlands. We have sold hundreds of thousands of footrests for diverse workplace, worldwide. In the medical environment you will find these in partitioned workplaces and behind desks. In addition, you will find them in environments where good foot support is necessary, such as laboratories. We are proud of the quality of the mechanism, in combination with a large adjustment range and robustness. Qualities that are not matched by other manufacturers. That is why the Score Pro 959 has been patented. And that is why we can offer a 5-year guarantee on Score footrests.

Basic Line

Ergonomic accessories

Digital communication and presentation everywhere

Digital and interactive communication and presentation has become a commonplace daily task. ScoreMedi offers a range of ErgoFrame® suspension systems to make interactive work and presentation even healthier. From a presentation screen in the office or boardroom, to classrooms and lecture halls. The suspension systems from ScoreMedi ensure that you work with the presentation screen at **the correct ergonomic height**.

The **suspension systems** can be mounted on the wall, or placed on wheels freestanding in the room. The ErgoFrame® display screen holders are suitable for every brand of display screen, even for the largest format interactive screens. Virtually every model of ErgoFrame® is equipped with an **electric and silent height adjustment system**.

Conditions

Guarantee

ScoreMedi chairs are produced according to high quality standards and long lasting materials, with:

- Life-long guarantee on the gas lift
- 5-year guarantee on all metal parts
- 2-year guarantee on upholstery if used for its intended purpose

Delivery conditions

On all our current and future quotations, assignments and other agreements apply to the 'Metaalunie conditions' deposited at the Registry of the District Court in Rotterdam on 1 January 2014. Publication of the Metaalunie, P.O. Box 2600, 3430 GA Nieuwegein. These conditions are available on our website www.scorenl.com and are sent upon request. When (general) conditions on this page differ from 'Metaalunie conditions', the conditions on this page are leading.

Delivery Conditions

- ScoreMedi sells to resellers only
- Packaging: All products are appropriately packed in cardboard boxes. The chairs are packed knocked down in boxes.
- Every effort has been made to ensure that all information is correct at the time of going to press. Prices and product specifications are subject to change without notice Dutch 'Metaalunie' conditions of sale apply to all deliveries, these are available on request.
- Mentioned measurements in this catalogue are approximate.
For exact measurements of your product, please contact ScoreMedi customer services per e-mail export@scorenl.com or by telephone +31 (0)594 554 000

© Score BV 2015. Product specifications are subject to change without notice. Errors and omissions excepted.

How to recognise a good working chair

- 1** The back supports the lumbar area of the back.
- 2** Seat and back are finished in reliable and easy to clean material. The seat surface must not be too smooth.
- 3** The chair rotates smoothly and is easy to adjust in height
- 4** For flexible workplaces the chair is simple and easy to adjust to the wishes of the user.
- 5** A five star base and a large outline for a good stability and security of the chair.
- 6** The back is slightly and moderately curved
- 7** If possible the chair should have armrests that are adjustable in height and width.
- 8** The angle between the back and the seat is approximately 90°.
- 9** The size of the seat has to be large enough so the user can change his seating position regularly and if possible provided with a seat slide for tall people.
- 10** The seat is nearly flat and rounded on the frontside.
- 11** The robust foot support has a comprehensive size, so that the feet can be moved and easy to adjust to the wishes of the user
